# 1. INTRODUCTION

## 1.1 Project Overview

Development of a regional intelligent transportation system (ITS) architecture is one of the most important steps in planning for and implementing ITS in a region. ITS architectures provide a framework for implementing ITS projects, encourage interoperability and resource sharing among agencies, identify applicable standards to apply to projects, and allow for cohesive long-range planning among regional stakeholders. The ITS architecture allows stakeholders to plan for what they want their system to look like in the long-term and then break out the system into smaller pieces that can be implemented as funding permits.

ITS architectures satisfy the conformity requirements first established in the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21) highway bill and continued in the Safe, Accountable, Flexible and Efficient Transportation Equity Act – A Legacy for Users (SAFETEA-LU) bill passed in 2005. In response to Section 5206(e) of TEA-21, the Federal Highway Administration (FHWA) issued a final rule and the Federal Transit Administration (FTA) issued a final policy that required regions implementing any ITS project to have an ITS architecture in place by April 2005. After this date, any ITS projects must show conformance with their regional ITS architecture in order to be eligible for funding from FHWA or FTA.

In an effort led by the Texas Department of Transportation (TxDOT) Austin District, the Austin Region completed an ITS architecture in March of 2003 using Version 3.0 of the National ITS Architecture. The geographic boundaries of the original architecture for the Region were those of the Capital Area Metropolitan Planning Organization (CAMPO) area and included Travis, Williamson, and Hays Counties. Since that time, the Austin Region has grown and the National ITS Architecture has been revised.

In January of 2006, the TxDOT Austin District began a project to update the Austin Regional ITS Architecture using Version 5.1 of the National ITS Architecture. As part of this project, the geographic boundaries have been expanded to cover the entire TxDOT Austin District. The project focuses on a 20-year vision of ITS for the Region. A project website was developed which contains additional information that was not feasible to include in the report. In addition, a separate ITS Deployment Plan was developed to identify and prioritize specific ITS projects recommended for the Region in order to implement the ITS architecture.

The ITS Architecture and the ITS Deployment Plan were both developed with significant input from local, state, and federal officials. A series of workshops were held to solicit input from stakeholders and ensure that the plans reflected the unique needs of the Region. Copies of the draft reports were made available to all stakeholders, and the project website allowed stakeholders to submit comments directly to the project team. The Regional ITS Architecture and Deployment Plan developed reflects an accurate snapshot of existing ITS deployment and future ITS plans in the Region. Needs and priorities of the Region will change over time, and, in order to remain effective, this plan should be periodically reviewed and updated.

## 1.2 Document Overview

The Austin Regional ITS Architecture report is organized into five key sections:

### Section 1 – Introduction

This section provides an overview of the National ITS Architecture requirements, the Austin Regional ITS Architecture, and the key features and stakeholders in the Austin Region.

### Section 2 – Regional ITS Architecture Development Process

An overview of the key steps involved in developing the ITS architecture for the Austin Region is provided in this section. It includes a discussion of stakeholder involvement, architecture workshops, and the architecture development process.

### Section 3 – Customization of the National ITS Architecture for the Austin Region

This section contains a summary of regional needs and details the customization of the National ITS Architecture to meet the ITS vision for the Region. The market packages that were selected for the Region are included in this section and interconnects are presented, including the “Sausage Diagram” showing the relationships of the key subsystems and elements in the Region, system interfaces, and the physical subsystem architecture flows.

### Section 4 – Application of the Regional ITS Architecture

Functional requirements and standards that apply to the Region, as indicated by the Regional ITS Architecture, are presented in Section 4. Operational concepts identifying stakeholder roles and responsibilities have been prepared, and potential agreements to support the sharing of data and resources have been identified. The section also includes information on how the Region anticipates deploying ITS to achieve their vision.

### Section 5 – Maintaining the Regional ITS Architecture

A maintenance plan has been developed for the Austin Regional ITS Architecture, and is included in this section. The plan outlines the procedure for updating the ITS architecture over time.

The Austin Regional ITS Architecture also contains six appendices:

- Appendix A – Stakeholder Interviews;
- Appendix B – Market Package Definitions;
- Appendix C – Customized Market Packages;
- Appendix D – Context Diagrams;
- Appendix E – Element Functions; and
- Appendix F – Architecture Maintenance Documentation Form.

During the development of the Austin Regional ITS Architecture a web site was established that contains the architecture documentation, element inventories, market packages, interconnects, interfaces, and functional requirements. This web site was temporarily housed at [www.consystem.com](http://www.consystem.com) under the Texas Regional link and may be hosted at a later date by the Texas Department of Transportation. The web site provides hyperlinks to more detailed information about the Austin Regional ITS Architecture than what could feasibly be included in the printed document. In certain sections of the document, readers are referred to the web site for additional information and details. All of the files contained on the website are also available on a project CD.

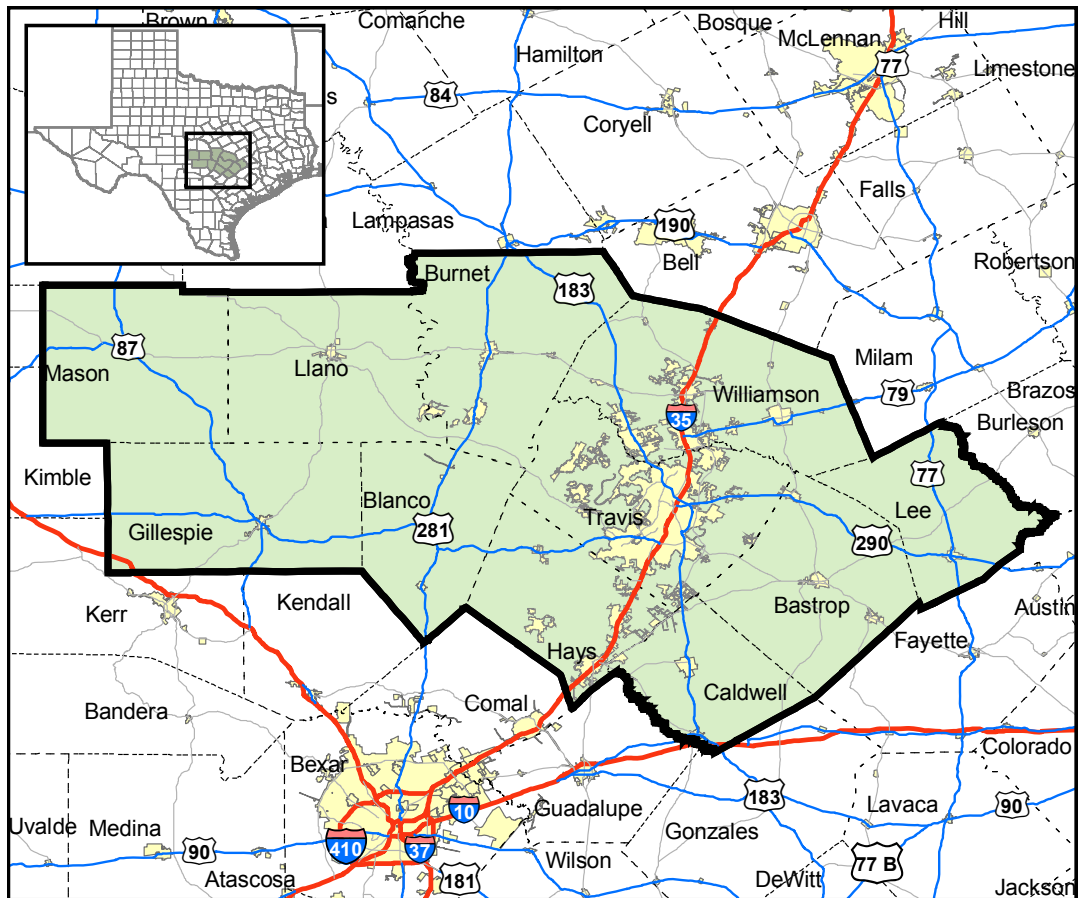

### 1.3 The Austin Region

#### 1.3.1 Austin Region Scope of Regional ITS Architecture

The Austin Region is defined by the boundaries of the 11 county TxDOT Austin District as shown in **Figure 1**.

The Region encompasses 9,489 square miles in central Texas. It includes Bastrop, Blanco, Burnet, Caldwell, Gillespie, Hays, Lee, Llano, Mason, Travis, and Williamson Counties. The largest city in the Region is Austin, which is situated in the center of Travis County. The Austin Region population is approximately 1.5 million.

**Figure 1 – Austin Regional Boundaries**

While Austin is the largest city in the Region, there are many other communities within the geographic boundaries of the Region. When developing the stakeholder group, invitations were sent to cities with a population greater than 5,000, counties, state and federal agencies, and area transit providers. **Table 1** in Section 1.3.4 identifies the stakeholders that participated in the process.

When developing the architecture, a 20-year vision for ITS in the Region was documented. In the ITS Deployment Plan, the 20-year time frame was broken down into smaller time periods to prioritize and sequence the projects. The naming convention used for elements in the Austin Regional ITS Architecture is consistent with the naming convention used in

other regional ITS architectures in Texas, including those in the adjacent Brazos Valley, Waco, West Central Texas, San Angelo, and Yoakum Regions. This consistency provides seamless connections to those other architectures without requiring that they be specifically called out. The Other TxDOT TMCs and Other TxDOT District Maintenance Sections Dispatch elements allow connections to all of the adjacent Regions. As in other Regions, statewide commercial vehicle operations were not included in the regional ITS architecture because they are documented in the statewide Commercial Vehicle Information Systems and Networks (CVISN) plan.

### *1.3.2 Transportation Infrastructure*

As illustrated in **Figure 1**, the Region is served by numerous State and Federal highways. The primary roadway facilities include I-35, US 183, US 281, US 290, and SH 71. Several toll facilities are planned or under construction for the Region including US 183A, portions of US 183 and US 290, SH 45, portions of SH 71, and SH 130.

I-35 is the primary highway in the Region; I-35 and US 183 run north-south and SH 71 and US 290 run east-west. The effective operation of I-35 is critical to the movement of goods and people through the State of Texas as well as the United States. I-35 extends from Laredo, Texas on the U.S.-Mexico border to Duluth, Minnesota. Construction and incidents along I-35 can have a severe impact on commercial vehicle traffic and motorists traveling through the Region on this significant cross-country facility.

US 183, US 290, and SH 71 serve several rapidly growing communities north and east of the City of Austin. Most of the traffic along the roadways is daily commuter traffic and this travel pattern is anticipated to continue growing in coming years.

When complete, SH 130 will provide an alternate route for trucks to avoid I-35 through the Austin metropolitan area. The other toll facilities will improve access to suburbs of Austin and serve primarily daily commuter traffic.

### *1.3.3 Austin Region ITS Plans*

A Regional ITS Architecture for the Austin Region was first completed in 2003 using Version 3.0 of the National ITS Architecture. In 2005, the Region determined that an update to the architecture was needed to incorporate additional stakeholder agencies and address new market packages included in Version 5.1 of the National ITS Architecture. TxDOT contracted with a team of consultants to lead the update effort.

The Austin Region has many ITS components deployed. The Combined Transportation and Emergency Communications Center (CTECC) is a joint operations center from which TxDOT manages their ITS field components and the City of Austin and Travis County dispatch emergency responders. TxDOT field equipment includes dynamic message signs (DMS), closed-circuit television cameras (CCTV), vehicle detection equipment, highway advisory radio (HAR), and lane control signals. Many of the cities in the Region have transportation operations centers in place and are deploying ITS on arterial streets such as closed loop signal systems with video imaging vehicle detection system (VIVDS) and signal preemption for emergency vehicles. Both Capital Metro and Capital Area Rural Transportation System have plans to add to their existing ITS deployments. As the Austin Region pursues funding opportunities for additional ITS projects, it will be necessary to show that a project fits within the ITS architecture developed for the Region.

### 1.3.4 Stakeholders

Due to the fact that ITS often transcends traditional transportation infrastructure, it is important to involve non-traditional stakeholders in the architecture development and visioning process. Input from these stakeholders, both public and private, is a critical part of defining the interfaces, integration needs, and overall vision for ITS in a region.

**Table 1** contains a listing of stakeholders in the Austin Region who have participated in the project workshops or provided input to the study team as to the needs and issues that should be considered as part of the Austin Regional ITS Architecture. Other stakeholders that were invited to participate but were not able to attend were provided minutes of workshops, copies of reports, and access to the project web site to encourage their participation as much as possible.

## 2. REGIONAL ITS ARCHITECTURE DEVELOPMENT PROCESS

Development of the Regional ITS Architecture and Deployment Plan for the Austin Region relied heavily on stakeholder input to ensure that the architecture reflected local needs. Six workshops were held with stakeholders to gather input, and a web site with the components of the Regional ITS Architecture as well as hard copies of documents were made available to stakeholders for review and comment. Many individual interviews were also conducted with representatives of stakeholder agencies.

The process followed for the Austin Region was designed to ensure that stakeholders could provide input and review for the development of the Region’s ITS Architecture and Deployment Plan. **Figure 2** illustrates the stakeholder involvement process utilized.

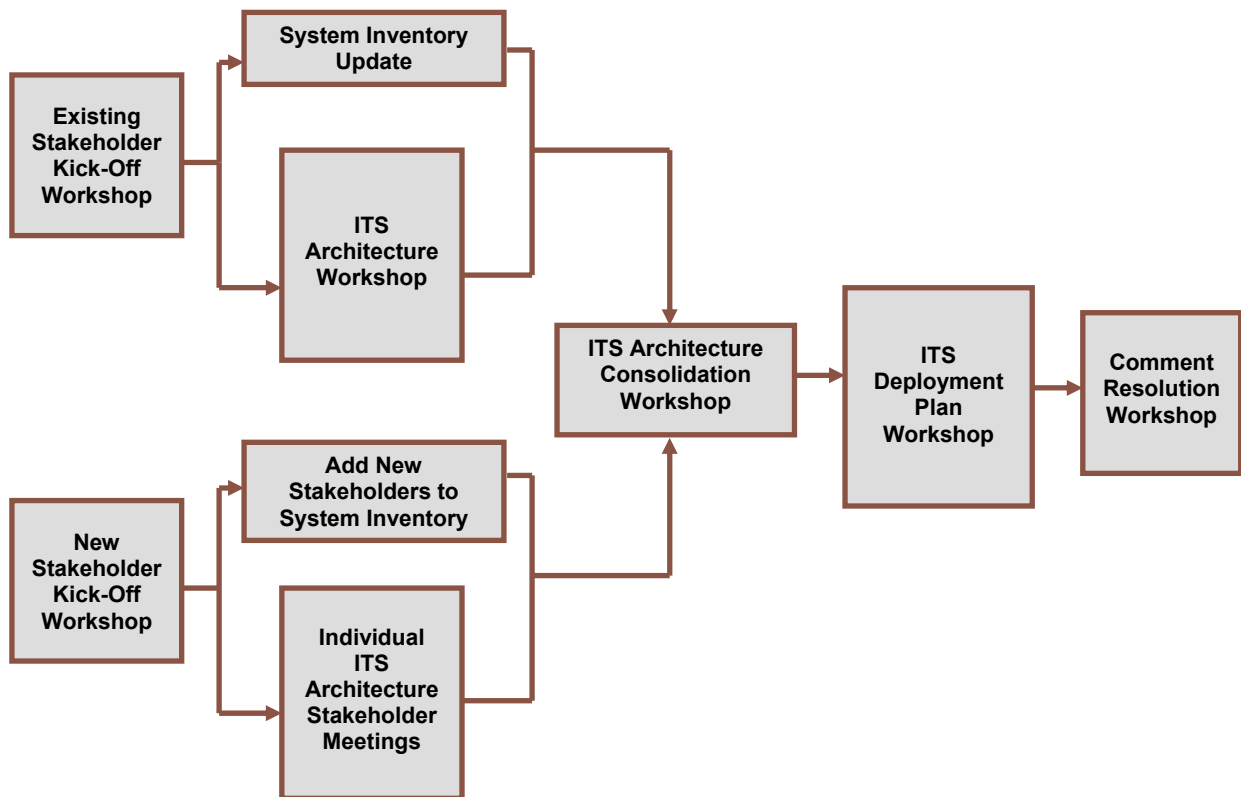

Figure 2 – Austin Regional ITS Architecture and Deployment Plan Development Process

A total of six workshops with stakeholders over a period of eight months were used to develop the Austin Regional ITS Architecture and Deployment Plan. These workshops included:

- Kick-Off Workshop (one for existing stakeholders and another for new stakeholders);
- ITS Architecture Workshop;
- ITS Architecture Consolidation Workshop;
- ITS Deployment Plan Workshop; and
- Comment Resolution Workshop.

In addition to the workshops listed above, the project team met individually with stakeholders, especially the new stakeholders, to document their ITS equipment and future needs. Key components of the process are described below:

**Existing Stakeholder Kick-Off Workshop:** Stakeholder agencies that were involved in the initial development of the Austin Regional ITS Architecture were invited to a project Kick-Off Workshop. At this workshop stakeholders reviewed the ITS services included in the 2003 architecture and identified additional ITS needs for the Region.

**System Inventory Update:** Collecting information to update the system inventory began at the Kick-Off Workshop through stakeholder discussions. After the Kick-Off Workshop, the team followed up with a number of stakeholders to gather additional input. To complete the inventory, stakeholders were presented with a draft inventory at the ITS Architecture Workshop for modification.

**ITS Architecture Workshop and ITS Architecture Development:** The purpose of the ITS Architecture Workshop was to review the system inventory with existing stakeholders and update the Austin Regional ITS Architecture to address market packages added to the National ITS Architecture in Version 5.1 and additional regional needs. Training on the National ITS Architecture was integrated into the workshop so that key elements of the architecture, such as market packages, could be explained prior to the selection and editing of these elements. The result of the ITS Architecture Workshop was an updated ITS Architecture for the Austin Region. Following the workshop, a Draft Regional ITS Architecture was prepared and placed on the project website for stakeholder review and comment.

**New Stakeholder Kick-Off Workshop:** A group of additional stakeholders who had not been involved in the original architecture development effort was identified and invited to the New Stakeholder Kick-Off Workshop. At this workshop stakeholders identified ITS needs for the Region.

**Addition of New Stakeholders to System Inventory:** Collecting information to add the new stakeholder agencies to the system inventory began at the New Stakeholder Kick-Off Workshop through discussions with stakeholders to determine existing and planned ITS elements in the Region. After the Kick-Off Workshop, the team followed up with a number of stakeholders to gather additional input.

**Individual ITS Architecture Stakeholder Meetings:** The project team scheduled a series of individual agency meetings with new stakeholders to finalize the system inventory and customize market packages to document existing ITS elements as well as ITS needs. The information from these meetings was compiled and used to update the architecture. A Draft Austin Regional ITS Architecture document was prepared and sent to stakeholders for review. In addition, the project website was updated for stakeholder review and comment.

**ITS Architecture Consolidation Workshop:** Both existing and new stakeholder groups were invited to a workshop to address regional coordination of ITS services. The workshop focused on market packages that involve multiple agencies. Following the workshop, the architecture was revised and a Revised Draft Austin Regional ITS Architecture document was prepared and sent to stakeholders for review. In addition, the project website was updated for stakeholder review and comment.

**ITS Deployment Plan Workshop:** A draft project listing for the Region was presented to stakeholders at the Regional ITS Deployment Plan Workshop. Stakeholders were asked to provide input on the recommended projects, responsible agencies, associated costs, and deployment timeframe. Following the workshop, a Draft Regional ITS Deployment Plan document was prepared and sent to stakeholders for review and comment.

**Comment Resolution Workshop:** A Comment Resolution Workshop was held with stakeholders to review the Revised Draft Regional ITS Architecture and the Draft Regional ITS Deployment Plan. The next steps for the Region were also discussed. Comments were incorporated, and a final Regional ITS Architecture and Regional ITS Deployment Plan were developed.

### 3. CUSTOMIZATION OF THE NATIONAL ITS ARCHITECTURE FOR THE AUSTIN REGION

#### 3.1 Systems Inventory

An important initial step in the architecture development process is to establish an inventory of existing ITS elements. At the Kick-Off Workshops and through subsequent discussions with agency representatives throughout the Region, Austin stakeholders provided the team with information about existing and planned systems that would play a role in the Region's ITS architecture.

The National ITS Architecture has eight groups of ITS service areas. Existing, planned, and future systems in the Austin Region were identified in the following service areas:

- **Traffic Management** – includes the CTECC as well as other existing and future traffic management centers (TMCs), detection systems, CCTV, fixed and portable DMS, electronic toll collection, and other related technologies.
- **Emergency Management** – includes emergency operations/management centers (including CTECC), improved information sharing among traffic and emergency services, automated vehicle location (AVL) on emergency vehicles, traffic signal preemption for emergency vehicles, and wide-area alerts.
- **Maintenance and Construction Management** – includes work zone management, roadway maintenance and construction information, and road weather detection systems.
- **Public Transportation Management** – includes transit and paratransit AVL, transit travel information systems, transit signal priority, electronic fare collection, and transit security.
- **Commercial Vehicle Operations** – includes coordination with CVISN efforts, and hazardous materials (HAZMAT) management.
- **Traveler Information** – includes broadcast traveler information, traveler information kiosks and HAR.
- **Archived Data Management** – includes electronic data management and archiving systems.
- **Vehicle Safety** – these systems were discussed; however, at this time, this service group is primarily a private sector initiative to incorporate technologies such as intersection collision avoidance and automated vehicle operation systems into vehicles.

#### 3.2 Regional Needs

Needs from the Region were identified by Stakeholders at the Kick-Off Workshops held in January and February of 2006 as well as through the individual stakeholder meetings. **Appendix A** contains the stakeholder interview information sheets that document the discussions held at the individual meetings.

The needs identified provided guidance for determining which market packages should be included in the architecture. Stakeholders identified ITS needs for the Austin Region in the following areas:

- Traffic management;
- Emergency management;
- Maintenance and construction management;
- Transit operations;

- Traveler information; and
- Archive data management.

Section 3.4.3 contains additional information about the specific needs identified and relates those needs to the market packages that document the corresponding ITS service.

### 3.3 Element Customization

The inventory and needs documented at the Kick-Off Workshop are the starting point for developing an ITS architecture for the Austin Region. These ITS systems and components are used to customize the National ITS Architecture and create the architecture for the Austin Region.

#### 3.3.1 Subsystems and Terminators

Each identified system or component in the Austin Regional ITS inventory was mapped to a subsystem or terminator in the National ITS Architecture. Subsystems and terminators are the ‘entities’ that represent systems in ITS. Subsystems are the highest level building blocks of the physical architecture, and the National ITS Architecture groups them into four major classes: Centers, Field, Vehicles, and Travelers. Each of these major classes includes various subsystems that represent a set of transportation functions (or processes) that are likely to be collected together under one agency, jurisdiction, or location, and correspond to physical elements, such as traffic operations centers, traffic signals, or vehicles. **Figure 3** shows the National ITS Architecture subsystems. This figure, also known as the “sausage diagram,” is a standard interconnect diagram showing the relationships of the various subsystems within the architecture; a customized interconnect diagram for the Austin Region is shown later in **Figure 4**. Communication functions between the subsystems are represented in the ovals. It should be noted that fixed-point to fixed-point communications include not only twisted pair and fiber optic technologies, but also such wireless technologies as microwave and spread spectrum.

Terminators are the people, systems, other facilities, and environmental conditions outside of ITS that need to communicate or interface with ITS subsystems. They help to define the boundaries of the National ITS Architecture as well as a regional system. Examples of terminators include drivers, traffic operations personnel, information service providers, and government reporting systems.

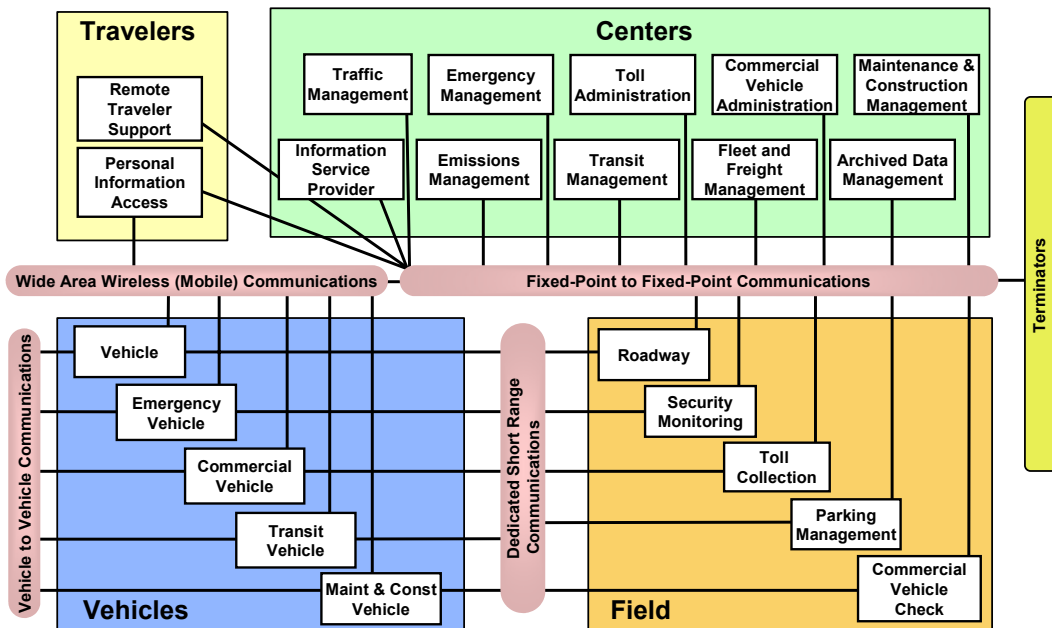

Figure 3 – National ITS Architecture Physical Subsystem Interconnect Diagram

### 3.3.2 ITS Inventory by Stakeholder

Each stakeholder is associated with one or more systems or elements (subsystems and terminators) that make up the transportation system in the Austin Region. A listing of stakeholders, as identified in the architecture, can be found in **Table 2** along with a description of the stakeholder. For example, rather than individually documenting each of the smaller municipalities in the Region, a single stakeholder was created for municipal agencies which represents the cities and towns not specifically called out in the architecture. **Table 3** sorts the inventory by stakeholder so that each stakeholder can easily identify and review all of the architecture elements associated with their agency. The table includes the status of the element. In many cases an element classified as existing might still need to be enhanced to attain the service level desired by the Region.

The information in **Table 3** is included on the Austin ITS Architecture web site, which was accessible at the time this report was developed at [www.consystec.com](http://www.consystec.com) by selecting the link to Texas Regional, then the link to the Austin Region, and then the “Inventory by Stakeholder” button which will open the stakeholder list. Each element in the list contains a hyperlink to more detailed information that includes element status, a description, the responsible stakeholder, and other elements within the inventory with which it interfaces.

**Table 2 – Austin Stakeholder Descriptions**

| Stakeholder   | Stakeholder Description  |
|---|--|
| Amtrak  | Passenger rail services provider with stations in San Marcos, Austin, and Taylor.  |
| Archive Data Users                                  | Users (and their systems) of general archive data within the Region.   |
| Army Corps of Engineers                             | The US Army Corps of Engineers is the regulatory agency responsible for reservoirs and waterways including Lake Georgetown and Lake Granger.   |
| Austin/Travis County Office of Emergency Management | City of Austin/Travis County joint department that coordinates the citywide and countywide response to large-scale emergencies and disasters. This includes planning and activities for preparedness, response, and recovery phases of a disaster. The Austin/Travis County Emergency Operations Center (EOC) is part of the Office of Emergency Management. |
| Capital Area MPO                                    | Metropolitan planning organization (MPO) for the Austin metropolitan area that currently includes Travis, Williamson, and Hays Counties.   |
| CapMetro  | Capital Metropolitan Transportation Authority provides fixed route and paratransit service in the City of Austin and several surrounding jurisdictions.  |
| CARTS   | Capital Area Rural Transportation System provides fixed route, commuter route, and demand response transit in portions of Bastrop, Blanco, Burnet, Caldwell, Fayette, Hays, Lee, Travis, and Williamson Counties.  |
| Cellular Providers                                  | Represents cellular service providers in the Austin Region.  |
| City of Austin                                      | Municipal government for the City of Austin. Includes both traffic and maintenance sections for the City as well as the Watershed department.  |
| City of Austin and Travis County                    | Emergency medical services provider for Travis County, including the City of Austin.   |
| City of Austin Aviation Department                  | City of Austin department responsible for the operation of Austin-Bergstrom International Airport.   |
| City of Austin Fire Department                      | City of Austin department responsible for fire dispatch and response. Dispatched out of CTECC.   |
| City of Austin Police Department                    | City of Austin department responsible for police dispatch. Dispatched out of CTECC.  |
| City of Cedar Park                                  | Municipal government for the City of Cedar Park. Includes both traffic and maintenance sections for the City.  |
| City of Georgetown                                  | Municipal government for the City of Georgetown. Includes both traffic and maintenance sections for the City.  |
| City of Round Rock                                  | Municipal government for the City of Round Rock. Includes both traffic and maintenance sections for the City.  |
| City of Round Rock Public Safety                    | City of Round Rock department responsible for police and fire dispatch as well as operating the Round Rock EOC.  |
| City of San Marcos                                  | Municipal government for the City of San Marcos. Includes both traffic and maintenance sections for the City.  |
| Commercial Information Provider                     | Private provider of regional transportation information, usually on a subscription basis.  |
| Commercial Vehicle Fleet Operations                 | Private commercial vehicle operations that operate within the Region.  |
| County Departments                                  | County government departments such as road and bridge.   |

**Table 2 – Austin Stakeholder Descriptions (continued)**

| Stakeholder                             | Stakeholder Description   |
|---|---|
| County Emergency Management Agencies    | Agencies that coordinate their county's response to large-scale emergencies and disasters. This includes planning and activities for preparedness, response, and recovery phases of a disaster.   |
| County Public Safety                    | County public safety dispatch and emergency response. Dispatch includes County Sheriff and any other county public safety services such as emergency medical services (EMS). In many counties responsibilities also include dispatch of Department of Public Safety troopers.   |
| CTRMA                                   | The Central Texas Regional Mobility Authority is responsible for the construction, maintenance and operation of several toll roads in the Region (i.e. US 183A).  |
| Department of Public Safety             | State public safety agency whose responsibilities include issuing AMBER Alerts.   |
| Financial Institution                   | Banks involved in the transfer of funds for fare collection as well as for other fee based transportation services.   |
| Hays County                             | Represents the county offices and stakeholders of Hays County.  |
| Independent School Districts            | Public school districts within the Region. The districts have been included primarily for their role in emergency evacuations where school buses are utilized.  |
| Intercity Carriers                      | Private bus carriers that carry passengers to/from intercity terminals (e.g. Greyhound).  |
| Local Media                             | Includes both print (newspaper) and broadcast (TV, radio) news media.   |
| Lower Colorado River Authority          | Manages the water supply of the lower Colorado River basin. LCRA generates electricity, operates the Mansfield Dam, the dam on Lake Buchanan as well as several smaller dams in the Region.   |
| Municipalities                          | Municipalities located within the Region that are not specifically called out by the ITS architecture (i.e. Leander, Marble Falls, and Burnet).   |
| NOAA                                    | National Oceanic and Atmospheric Administration (includes the National Weather Service).  |
| Other Regional Communications Providers | Intended to be a placeholder for other regional communications providers that operate on either 800 MHz or 900 MHz.   |
| Private Concierge Service Provider      | Private company who provides mayday support to vehicles through a subscription service.   |
| Private Rail Operations                 | Companies that operate freight rail within the Region.  |
| Private Taxi Providers                  | Private companies that provide taxi services within the Region.   |
| Private Tow/Wrecker Providers           | Private companies that provide tow or wrecker services for the Region.  |
| Private Transportation Providers        | Private transportation service providers such as taxis, shuttle services, and the Texas State University bus system that operates within the Region.  |
| Private Travelers                       | Traveling public accessing various modes of transportation, including surface street, air, rail/transit, and non-motorized.   |
| Public/Private Ambulance Providers      | EMS providers located within the Region.  |
| Radio Network Users                     | All current and future users of the radio network. This includes TMCs, maintenance dispatch and vehicles, emergency dispatches and vehicles, transit management/dispatch and vehicles, toll facilities, and multi-modal transportation service providers. The vision for the radio system is that in the future all members of these service groups will have interoperable voice and data radio systems to facilitate a coordinated response during an incident. |

**Table 2 – Austin Stakeholder Descriptions (continued)**

| <b>Stakeholder</b>                               | <b>Stakeholder Description</b>  |
|--|---|
| Regional Event Promoter                          | Group that promotes events within the Region, such as a Chamber of Commerce or Visitor's Bureau.  |
| Regional Medical Centers                         | Hospital/trauma centers in the Region.  |
| Regional Utility Companies                       | Utility companies that operate in the Region.   |
| Rural Fire Departments                           | Rural fire departments that operate using paid, volunteer, or a combination of paid and volunteer staff. These departments are usually dispatched by the County Sheriff or other area public safety answering point (PSAP).                                 |
| Service Agencies                                 | State and Federal agencies who subsidize the funding of paratransit and other demand response transit providers.  |
| Statewide Toll Authorities                       | Own and operate the statewide HUB system for toll collection and reconciliation.  |
| TCEQ – Texas Commission on Environmental Quality | The Texas Commission on Environmental Quality that is responsible for measuring and evaluating the emissions data for cities within the state of Texas.   |
| Texas DEM  | The Texas Department of Emergency Management is a division of the Texas Department of Public Safety responsible for the response to large-scale emergencies and disasters.  |
| Travis County Public Safety                      | Public safety and emergency response agencies for Travis County. Includes the Travis County Sheriff and Austin/Travis County EMS.   |
| Travis County Road Department                    | Department responsible for the construction and maintenance of county roads in Travis County.   |
| TxDOT  | Texas Department of Transportation. Responsible for the maintenance and construction of interstates, state routes, and other state roadway facilities in Texas. This general TxDOT stakeholder includes all elements not part of the TxDOT Austin District. |
| TxDOT Austin District                            | Austin District of TxDOT. Includes traffic, maintenance, and planning and programming. The District includes Mason, Gillespie, Llano, Burnet, Blanco, Hays, Travis, Williamson, Caldwell, Bastrop, and Lee Counties.  |
| TxDOT Travel Division                            | Represents the Travel Division for TxDOT.   |
| TxDOT TTA Division                               | The Texas Turnpike Authority is the division of TxDOT responsible for the construction, maintenance and operations of toll facilities in the region not managed by CTRMA.   |
| University of Texas                              | The University of Texas (UT) at Austin. Includes all departments of the University, including the UT events department and the UT Police Department.  |
| USGS   | The US Geological Survey collects and analyzes environmental data in the region including water level data.   |
| Williamson County Public Safety                  | Public safety and emergency response agencies for Williamson County. Includes the Williamson County Sheriff and Williamson County EMS.  |
| Williamson County Road Department                | Department responsible for the construction and maintenance of county roads in Williamson County.   |

**Table 3 – Austin Inventory of ITS Elements**

| <b>Stakeholder</b>                                  | <b>Element Name</b>                             | <b>Element Description</b>  | <b>Status</b> |
|---|---|---|---------------|
| Amtrak  | Amtrak Dispatch                                 | The dispatch function for Amtrak.   | Existing      |
| Archive Data Users                                  | Archive Data Users                              | Any user of archive data products from any Regional archive management system. This may include individual users, computer applications, or modeling systems utilizing the archived data.   | Existing      |
| Army Corps of Engineers                             | Army Corps of Engineers Flood Detectors         | Flood monitoring equipment owned and operated by the Army Corps of Engineers. Used to determine water elevations of rivers, causeways, etc. and report it back to local agencies (traffic, transit, emergency management, maintenance, etc.).   | Existing      |
|   | Army Corps of Engineers Flood Monitoring Center | Represents the control center for the Army Corps of Engineers where flood monitoring equipment sends data.  | Existing      |
| Austin/Travis County Office of Emergency Management | Austin/Travis County EOC (CTECC)                | The emergency operations center (EOC) for the City of Austin and Travis County that is located in the CTECC building in Austin.   | Existing      |
| Capital Area MPO                                    | Capital Area MPO Archive                        | Archive management system for the MPO for the City of Austin and surrounding areas.   | Planned       |
| CapMetro  | CapMetro Barrier System                         | Barrier system used to close parking lots when at capacity, as well as at exit points for payment collection.   | Existing      |
|   | CapMetro Commuter Rail Operations Center        | The operations center for freight rail track owned and managed by CapMetro.   | Existing      |
|   | CapMetro Commuter Rail Vehicles                 | Commuter rail vehicles owned and operated by CapMetro. May have light emitting diode (LED) displays and closed-circuit television (CCTV) cameras installed on rail cars.  | Existing      |
|   | CapMetro DMS                                    | Dynamic message signs (DMS) owned and operated by CapMetro. May be at transit stops or on buses.  | Planned       |
|   | CapMetro Fixed Route Operations Center          | Dispatches all fixed route transit vehicles for CapMetro. Includes fixed route service to the University of Texas.  | Existing      |
|   | CapMetro Fixed Route Vehicles                   | Fixed route vehicles owned and operated by CapMetro. Vehicles may have automated vehicle location (AVL), security field equipment, and mobile data terminals (MDTs) for drivers. At some point in the future it is possible that they will also have automated fare payment and preemption devices. | Existing      |
|   | CapMetro Lessee Freight Cars                    | Freight rail vehicles operating on CapMetro track.  | Existing      |
|   | CapMetro Multimodal Center                      | The multimodal center for CapMetro.   | Planned       |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>   | <b>Element Name</b>                                       | <b>Element Description</b>   | <b>Status</b> |
|----------------------|---|--|---------------|
| CapMetro (continued) | CapMetro Parking Facility Equipment                       | Parking equipment owned by CapMetro that monitors parking lots, determines the availability of parking spaces, closes a barrier system when the lot is full, and opens a barrier system after a customer has paid for their parking fee. | Planned       |
|                      | CapMetro RAPID Vehicles                                   | Rapid transit vehicles owned and operated by CapMetro.   | Existing      |
|                      | CapMetro Security Monitoring Field Equipment              | Secure area monitoring devices owned and operated by CapMetro. May includes monitoring systems on buses, at bus stops, or at transit terminals (including commuter rail).  | Existing      |
|                      | CapMetro STS Operations Center                            | Dispatch function for Special Transit Service (STS) vehicles. This is CapMetro's demand response paratransit service.  | Existing      |
|                      | CapMetro STS Vehicles                                     | Demand response vehicles owned and operated by CapMetro. Vehicles may have AVL, security field equipment, and MDTs for drivers. Possibly have automated fare payment. May include private taxi services as part of demand response.      | Existing      |
|                      | CapMetro Transit Kiosks                                   | Transit kiosks owned and operated by CapMetro. May include an opportunity to purchase a transit card, request trip information, or display notices on LED displays.  | Planned       |
|                      | CapMetro Transit Police                                   | A private police force that patrols and responds to incidents involving transit vehicles.  | Existing      |
|                      | CapMetro Vehicle Maintenance Garage                       | The maintenance and equipment repair facility for CapMetro.  | Existing      |
|                      | CapMetro Wayside Equipment                                | Wayside equipment owned and operated by CapMetro to support their freight rail operations.   | Existing      |
|                      | CapMetro Website  | The website for CapMetro where fare and schedule information may be found. In the future you may be able to request and pay for a demand response transit trip. Includes interactive voice response services.                            | Existing      |
| Regional Smart Card  | Smart Card used for Transit and other electronic systems. | Existing   |               |
| CARTS                | CARTS Barrier System                                      | Barrier system used to close parking lots when at capacity, as well as at exit points for payment collection.  | Existing      |
|                      | CARTS Demand Response Vehicles                            | Demand response vehicles owned and operated by the Capital Area Rural Transportation System (CARTS). Vehicles may have AVL, security field equipment, and MDTs for drivers. Possibly have automated fare payment.                        | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b> | <b>Element Name</b>                       | <b>Element Description</b>   | <b>Status</b> |
|--------------------|---|--|---------------|
| CARTS (continued)  | CARTS DMS                                 | DMS owned and operated by CARTS. May be at transit stops or on buses.  | Planned       |
|                    | CARTS Fixed Route Vehicles                | Fixed route vehicles owned and operated by CARTS. Vehicles may have AVL, security field equipment, and MDTs for drivers. Possibly have automated fare payment and preemption devices.                      | Existing      |
|                    | CARTS Maintenance Garage                  | The equipment maintenance garage for CARTS that performs the maintenance of all CART vehicles.   | Existing      |
|                    | CARTS Parking Facility Equipment          | Parking equipment owned by CARTS that monitors parking lots, determines the availability of parking spaces, and closes a barrier system when the lot is full (and prior to paying for an exit).            | Planned       |
|                    | CARTS Security Monitoring Field Equipment | Secure area monitoring devices owned and operated by CARTS. May include monitoring systems on buses, at bus stops, and at bus terminals.   | Planned       |
|                    | CARTS Transit Kiosks                      | Transit kiosks owned and operated by CARTS. May include an opportunity to purchase a transit card, request trip information, or display notices on LED displays.   | Planned       |
|                    | CARTS Transit Operations Center           | The transit dispatch function for CARTS. Dispatches all fixed route vehicles and demand response vehicles.   | Existing      |
|                    | CARTS Transit Police                      | A private police force that patrols and responds to incidents on CARTS transit vehicles.   | Existing      |
|                    | CARTS Website                             | The website for CARTS where fare and schedule information may be found. In the future you may be able to request and pay for a demand response transit trip. Includes interactive voice response services. | Existing      |
| Cellular Providers | Cellular Communications Device Systems    | The radio or voice communications network that is owned and operated by Cellular companies. Radio and voice networks used to transfer voice and data communications between agencies.                      | Existing      |
| City of Austin     | City of Austin Air Quality Division       | The emissions management division for the City of Austin.  | Existing      |
|                    | City of Austin Asset Management System    | This element represents a place-holder element for an asset management system for the City of Austin (e.g. bridge restrictions, pavement management, etc.).  | Planned       |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>            | <b>Element Name</b>                                  | <b>Element Description</b>  | <b>Status</b> |
|-------------------------------|--|---|---------------|
| City of Austin<br>(continued) | City of Austin CCTV                                  | CCTV cameras owned and operated by the City of Austin.  | Existing      |
|                               | City of Austin Convention and Visitors Bureau        | The City of Austin department of tourism responsible for attracting various travelers, conventions, etc. to the City of Austin.   | Existing      |
|                               | City of Austin DMS                                   | DMS owned and operated by the City of Austin.   | Planned       |
|                               | City of Austin Emissions Monitoring Field Equipment  | Emissions monitoring field equipment owned and operated by the City of Austin.  | Existing      |
|                               | City of Austin Fleet Services                        | The maintenance shop for all roadside equipment owned and operated by the City of Austin. Also provides maintenance to City of Austin vehicles.   | Existing      |
|                               | City of Austin Flood Closure Gates                   | Modified railroad closure gates operated by the City of Austin that are intended to keep traffic from flooded areas/roadways.   | Existing      |
|                               | City of Austin Flood Detectors                       | Flood warning systems for the City of Austin that detect flood events at low water crossings (dips) throughout the city. System includes monitoring and alerting functions and may be interconnected with other roadway equipment such as DMS to alert motorists. | Existing      |
|                               | City of Austin ITS Field Equipment                   | Field equipment owned and operated by the City of Austin that is not expressly identified. May include video imaging vehicle detection system (VIVDS), sensors, etc.  | Existing      |
|                               | City of Austin Maintenance and Construction Vehicles | Maintenance and construction vehicles for the City of Austin.   | Existing      |
|                               | City of Austin Pavement Management System            | The City of Austin's Pavement Management System that assists in storing, retrieving, analyzing and reporting information to help with pavement-related decision-making processes.   | Existing      |
|                               | City of Austin Permit Issuing Department             | Issues permits for parades, demonstrations, marathons, etc.   | Planned       |
|                               | City of Austin Permitting System                     | The City of Austin's commercial vehicle permitting system for hazardous materials (HAZMAT) and oversize/overweight permits.   | Existing      |
|                               | City of Austin Public Information Office             | The office provides the official interface between the City of Austin traffic and maintenance departments and interests outside the departments such as the media.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                 | <b>Element Name</b>                                      | <b>Element Description</b>  | <b>Status</b> |
|------------------------------------|--|---|---------------|
| City of Austin<br>(continued)      | City of Austin Public Works Dispatch                     | The maintenance and construction division for the City of Austin. Operates as the dispatch function for the City of Austin maintenance and construction vehicles.   | Existing      |
|                                    | City of Austin School Programmable Flasher System        | School zone warning system installed in the City of Austin school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers.                       | Existing      |
|                                    | City of Austin TMC                                       | The traffic management center (TMC) located in Austin that controls the traffic signal systems and other field equipment owned by the City of Austin.   | Existing      |
|                                    | City of Austin Traffic Database                          | The archive data management system for traffic operations and traffic information for the City of Austin.   | Planned       |
|                                    | City of Austin Traffic Signals                           | Traffic signal systems owned and operated by the City of Austin.  | Existing      |
|                                    | City of Austin Website                                   | Transportation information web page for the City of Austin. In the future will include real-time construction, work zone, special event, incident, and traffic information.   | Existing      |
|                                    | City of Austin Watershed Protection                      | Department within the City of Austin that is responsible for monitoring floods within the City and getting the information out to other agencies as well as the traveling public.   | Existing      |
| City of Austin and Travis County   | City of Austin/Travis County 911 Dispatch Center (CTECC) | The 911 public safety answering point (PSAP) for the City of Austin. Also dispatches emergency medical services (EMS) and County Sheriff for all of Travis County. Collocated with the TxDOT Austin District TMC – Combined Transportation and Emergency Communications Center (CTECC). | Existing      |
|                                    | City of Austin/Travis County Radio Systems               | The radio communications network that is owned and operated by Travis County. Radio networks used to transfer voice and data communications between agencies.   | Existing      |
| City of Austin Aviation Department | ABIA (Airport) Police Dispatch                           | Police dispatch for the airport grounds at Austin Bergstrom International Airport (ABIA).   | Existing      |
|                                    | ABIA (Airport) Police Vehicles                           | Police vehicles owned and operated by ABIA. Includes MDTs in police cruisers.   | Existing      |
|                                    | Austin Bergstrom International Airport                   | The international airport that serves the Austin area.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>               | <b>Element Name</b>                                    | <b>Element Description</b>   | <b>Status</b> |
|----------------------------------|--|--|---------------|
| City of Austin Fire Department   | City of Austin Fire Vehicles                           | Fire vehicles owned and operated by the City of Austin. ITS technologies on-board fire vehicles may include MDTs, AVL, signal pre-emption devices, etc. Also includes HAZMAT vehicles dispatched within the City limits.   | Existing      |
| City of Austin Police Department | City of Austin Crash Records Database                  | Crash or incident records database collected by the City of Austin.  | Existing      |
|                                  | City of Austin Police Vehicles                         | Police vehicles owned and operated by the City of Austin. ITS technologies on-board cruisers may include MDTs, AVL, etc.   | Existing      |
| City of Cedar Park               | City of Cedar Park CCTV                                | CCTV cameras owned and operated by the City of Cedar Park.   | Planned       |
|                                  | City of Cedar Park DMS                                 | DMS owned and operated by the City of Cedar Park.  | Planned       |
|                                  | City of Cedar Park ITS Field Equipment                 | Field equipment owned and operated by the City of Cedar Park that is not expressly identified. May include VIVDS, sensors, etc.  | Planned       |
|                                  | City of Cedar Park Public Information Office           | The office provides the official interface between the City of Cedar Park traffic and maintenance departments and interests outside the departments such as the media.   | Existing      |
|                                  | City of Cedar Park School Programmable Flasher Systems | School zone warning system installed in the City of Cedar Park school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers | Existing      |
|                                  | City of Cedar Park TOC                                 | The Traffic Operations Center (TOC) located in Cedar Park that controls the traffic signal systems and other field equipment owned by the City of Cedar Park.  | Planned       |
|                                  | City of Cedar Park Traffic Signals                     | Traffic signal systems owned and operated by the City of Cedar Park.   | Existing      |
| City of Georgetown               | City of Georgetown CCTV                                | CCTV cameras owned and operated by the City of Georgetown.   | Planned       |
|                                  | City of Georgetown DMS                                 | DMS owned and operated by the City of Georgetown.  | Planned       |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                | <b>Element Name</b>                                    | <b>Element Description</b>  | <b>Status</b> |
|-----------------------------------|--|---|---------------|
| City of Georgetown<br>(continued) | City of Georgetown Flood Closure Gates                 | Modified railroad closure gates operated by the City of Georgetown that are intended to keep traffic from flooded areas/roadways.   | Planned       |
|                                   | City of Georgetown Flood Detectors                     | Flood warning systems for the City of Georgetown that detect flood events at low water crossings throughout the city. System includes monitoring and alerting functions, and may be interconnected with other roadway equipment such as DMS to alert motorists that the roadway is flooded ahead. | Existing      |
|                                   | City of Georgetown ITS Field Equipment                 | Field equipment owned and operated by the City of Georgetown that is not expressly identified. May include VIVDS, sensors, etc.   | Existing      |
|                                   | City of Georgetown Public Information Office           | The office provides the official interface between the City of Georgetown traffic and maintenance departments and interests outside the departments such as the media.  | Existing      |
|                                   | City of Georgetown School Programmable Flasher Systems | School Zone warning system installed in the City of Georgetown school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers.                             | Existing      |
|                                   | City of Georgetown TOC                                 | The TOC located in Georgetown that controls the traffic signal systems and other field equipment owned by the City of Georgetown.   | Planned       |
|                                   | City of Georgetown Traffic Signals                     | Traffic signal systems owned and operated by the City of Georgetown.  | Existing      |
| City of Round Rock                | City of Round Rock CCTV                                | CCTV cameras that are owned and operated by the City of Round Rock.   | Existing      |
|                                   | City of Round Rock Convention and Visitors Bureau      | The City of Round Rock department of tourism responsible for attracting various travelers, conventions, etc. to the City of Round Rock.   | Existing      |
|                                   | City of Round Rock DMS                                 | DMS owned and operated by the City of Round Rock.   | Existing      |
|                                   | City of Round Rock Equipment Repair Facility           | The maintenance shop for all roadside equipment owned and operated by the City of Round Rock. Also provides maintenance to City of Round Rock vehicles.   | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                | <b>Element Name</b>                                    | <b>Element Description</b>  | <b>Status</b> |
|-----------------------------------|--|---|---------------|
| City of Round Rock<br>(continued) | City of Round Rock Flood Closure Gates                 | Modified railroad closure gates operated by the City of Round Rock that are intended to keep traffic from flooded areas/roadways.   | Existing      |
|                                   | City of Round Rock Flood Detectors                     | Flood warning systems for the City of Round Rock that detect flood events at low water crossings throughout the city. System includes monitoring and alerting functions, and may be interconnected with other roadway equipment such as DMS to alert motorists that the roadway is flooded ahead. | Existing      |
|                                   | City of Round Rock ITS Field Equipment                 | Represents ITS field equipment owned and operated by the City of Round Rock. May include traffic sensors, VIVDS, etc.   | Planned       |
|                                   | City of Round Rock Pavement Management System          | The City of Round Rock's Pavement Management System that assists in storing, retrieving, analyzing and reporting information to help with pavement-related decision-making processes.   | Existing      |
|                                   | City of Round Rock Permitting System                   | The City of Round Rock's commercial vehicle permitting system for HAZMAT and oversize/overweight permits.   | Existing      |
|                                   | City of Round Rock Public Information Office           | The office provides the official interface between the City of Round Rock traffic and maintenance departments and interests outside the departments such as the media.  | Existing      |
|                                   | City of Round Rock Public Works Dispatch               | The maintenance and construction division for the City of Round Rock. Operates as the dispatch function for the City of Round Rock's maintenance and construction vehicles.   | Existing      |
|                                   | City of Round Rock Public Works Vehicles               | Maintenance and construction vehicles for the City of Round Rock.   | Existing      |
|                                   | City of Round Rock School Programmable Flasher Systems | School Zone warning system installed in the City of Round Rock school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers.                             | Planned       |
|                                   | City of Round Rock TMC                                 | The TMC located in Round Rock that controls the traffic signal systems and other field equipment owned by the City of Round Rock.   | Existing      |
|                                   | City of Round Rock Traffic Signals                     | Traffic signal systems owned and operated by the City of Round Rock.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                  | <b>Element Name</b>                          | <b>Element Description</b>  | <b>Status</b> |
|-------------------------------------|--|---|---------------|
| City of Round Rock<br>(continued)   | City of Round Rock Website                   | Transportation information website for the City of Round Rock. In the future will include real-time construction, work zone, special event, incident, and traffic information.  | Existing      |
| City of Round Rock<br>Public Safety | City of Round Rock Communications Center     | Local PSAP for the City of Round Rock.  | Existing      |
|                                     | City of Round Rock Crash Records Database    | Crash or incident records database collected by the City of Round Rock.   | Existing      |
|                                     | City of Round Rock EOC                       | The emergency operations center for the City of Round Rock that is activated in the event of a natural or man-made disaster, or anytime a major threat is determined to exist.  | Planned       |
|                                     | City of Round Rock Fire Vehicles             | Fire vehicles owned and operated by the City of Round Rock. ITS technologies on-board fire vehicles may include MDTs, AVL, signal preemption devices, etc.  | Existing      |
|                                     | City of Round Rock Police Vehicles           | Police vehicles owned and operated by the City of Round Rock. ITS technologies on-board cruisers may include MDTs, AVL, etc.  | Existing      |
| City of San Marcos                  | City of San Marcos CCTV                      | CCTV cameras owned and operated by the City of San Marcos.  | Planned       |
|                                     | City of San Marcos DMS                       | DMS owned and operated by the City of San Marcos.   | Planned       |
|                                     | City of San Marcos Flood Detectors           | Flood warning systems for the City of San Marcos that detect flood events at low water crossings throughout the city. System includes monitoring and alerting functions, and may be interconnected with other roadway equipment such as DMS to alert motorists. | Planned       |
|                                     | City of San Marcos ITS Field Equipment       | Field equipment owned and operated by the City of San Marcos that is not expressly identified. May include VIVDS, sensors, etc.   | Existing      |
|                                     | City of San Marcos Public Information Office | The office provides the official interface between the City of San Marcos traffic and maintenance departments and interests outside the departments such as the media.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                  | <b>Element Name</b>                                     | <b>Element Description</b>  | <b>Status</b> |
|-------------------------------------|---|---|---------------|
| City of San Marcos<br>(continued)   | City of San Marcos School Programmable Flasher Systems  | School Zone warning system installed in the City of San Marcos school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers. | Existing      |
|                                     | City of San Marcos TOC                                  | The traffic management center located in San Marcos that controls the traffic signal systems and other field equipment owned by the City of San Marcos.   | Planned       |
|                                     | City of San Marcos Traffic Signals                      | Traffic signal systems owned and operated by the City of San Marcos.  | Existing      |
| Commercial Information Provider     | Private Sector Traveler Information Services            | Private traveler information providers serving the region. This element could, in the future, provide support to the National Traveler Information 511 number because it collects information from a broad array of operating centers. Could also include a website.  | Existing      |
| Commercial Vehicle Fleet Operations | Commercial Vehicles                                     | Privately owned commercial vehicles that travel throughout the Region. Included in the architecture to cover HAZMAT incident reporting.   | Existing      |
| Commercial Vehicle Fleet Operations | Private Fleet Management Systems                        | Includes private commercial fleet management operations in the Region.  | Existing      |
| County Departments                  | County Asset Management System                          | This element represents a place-holder element for an asset management system for the counties within the Region (e.g. bridge restrictions, pavement management, etc.).   | Planned       |
|                                     | County Equipment Repair Garage                          | The maintenance shop for all roadside equipment owned and operated by the counties within the Region.   | Existing      |
|                                     | County ITS Field Equipment                              | Portable DMS and CCTV used by the counties within the Region at times when construction information needs to be passed to travelers.  | Existing      |
|                                     | County Maintenance and Construction Operations Dispatch | The maintenance and construction division for the unnamed Counties within the Region. Operates as the dispatch function for and County's maintenance and construction vehicles.   | Existing      |
|                                     | County Maintenance and Construction Vehicles            | Maintenance and construction vehicles for the unnamed Counties within the Region.   | Planned       |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                   | <b>Element Name</b>                           | <b>Element Description</b>  | <b>Status</b> |
|--------------------------------------|---|---|---------------|
| County Emergency Management Agencies | Austin Region Incident and Mutual Aid Network | The regional incident and mutual aid network where all emergency management providers can share or gather information regarding an incident.  | Planned       |
|                                      | County EOC                                    | County EOCs, which represents the EOCs in each of the counties in the Region.   | Planned       |
| County Public Safety                 | County Public Safety Dispatch and PSAP        | Dispatch center for sheriff, fire and EMS at the county level in the TxDOT Austin Region.   | Existing      |
|                                      | County Public Safety Vehicles                 | County emergency vehicles including sheriff and EMS. Some preemption for EMS vehicles.  | Existing      |
| CTRMA                                | CTRMA CCTV                                    | CCTV cameras owned and operated by the Central Texas Regional Mobility Authority (CTRMA).   | Planned       |
|                                      | CTRMA DMS                                     | DMS owned and operated by CTRMA.  | Planned       |
|                                      | CTRMA Field Sensors                           | Field sensors owned and operated by CTRMA.  | Planned       |
|                                      | CTRMA Operations Center                       | The customer service center for the CTRMA. This represents the backend systems of the Toll Authority.   | Planned       |
|                                      | CTRMA Toll Collection SmartHUB                | A HUB device owned and operated by CTRMA that relays toll collection information to toll authorities throughout the Region.   | Planned       |
|                                      | CTRMA Toll Plazas                             | Toll plazas owned and operated by CTRMA.  | Existing      |
|                                      | CTRMA Toll Reconciliation Office              | The CTRMA office that reconciles toll payments with Texas Turnpike Authority (TTA). It is intended that TTA does the toll collection for the CTRMA. This office coordinates that collection through CTRMA toll plazas.      | Existing      |
|                                      | CTRMA Website                                 | Website owned and operated by CTRMA. Contains toll information and vehicle tag information posted in the website.   | Existing      |
| Department of Public Safety          | DPS and Other Public Safety Spectrum Systems  | The radio communications network that is owned and operated by the Department of Public Safety (DPS) and other public safety providers. Spectrum system is used to transfer voice and data communications between agencies. | Existing      |
|                                      | DPS Communications                            | Dispatches Highway Patrol Vehicles using two-way radio communication. Responsible for regional evacuation coordination.   | Existing      |
|                                      | DPS Emergency Vehicles                        | Highway Patrol vehicles that provide public safety services on state owned roads and highways.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                      | <b>Element Name</b>                        | <b>Element Description</b>   | <b>Status</b> |
|---|--|--|---------------|
| Department of Public Safety (continued) | State Office of Emergency Management       | State office that coordinates threat activities for the Texas DPS.   | Existing      |
|   | Statewide Crash Records Information System | Statewide database of vehicle crash records. Input to system provided by elements in the Region.   | Existing      |
|   | Statewide EOC                              | The statewide EOC.   | Existing      |
| Financial Institution                   | Financial Institution                      | Represents the financial institutions the regional transit agencies will use as part of electronic fare payment systems. Includes Health Services through TxDOT. | Existing      |
| Hays County                             | Hays County Radio Systems                  | The radio communications network that is owned and operated by Hays County. Radio networks used to transfer voice and data communications between agencies.      | Existing      |
| Independent School Districts            | Independent School District Buses          | Buses owned and operated by the independent school districts. May come equipped with security measures.  | Existing      |
|   | Independent School District Dispatch       | Dispatch function for each of the independent school districts in the Region. Includes radio communication with school buses.                                    | Existing      |
|   | Independent School District Police         | A private police force that patrols and responds to incidents on independent school district buses.  | Existing      |
| Intercity Carriers                      | Intercity Buses                            | The buses owned and operated by the intercity bus companies.   | Existing      |
|   | Intercity Carrier Dispatch                 | The dispatch function for intercity bus systems (e.g. Greyhound).  | Planned       |
| Local Media                             | Local Print and Broadcast Media            | Local TV (including cable TV), radio, and newspapers.  | Existing      |
| Lower Colorado River Authority          | LCRA Flood Monitoring Center               | The regional office/control center that monitors flood detection devices and provides real-time flood information to regional transportation providers.          | Existing      |
|   | LCRA Flood Monitoring Field Equipment      | Flood monitoring field equipment owed and operated by the Lower Colorado River Authority (LCRA) at the dams in the Region.                                       | Existing      |
|   | LCRA Radio Systems                         | The radio communications network that is owned and operated by the LCRA. Radio networks used to transfer voice and data communications between agencies.         | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b> | <b>Element Name</b>                       | <b>Element Description</b>  | <b>Status</b> |
|--------------------|---|---|---------------|
| Municipalities     | Municipal Asset Management System         | This element represents a place-holder element for an asset management system for the municipalities within the Region (e.g. bridge restrictions, pavement management, etc.).   | Planned       |
|                    | Municipal Convention and Visitors Bureau  | The municipal department of tourism that is responsible for attracting various travelers, conventions, etc. to the municipality.  | Existing      |
|                    | Municipal EOCs                            | The emergency operations centers owned and operated by the municipalities throughout the Region.  | Existing      |
|                    | Municipal Equipment Repair Garage         | The maintenance shop for all roadside equipment owned and operated by the municipalities not specifically called out in this architecture. Also provides maintenance to the same municipality's vehicles.   | Existing      |
|                    | Municipal Fire Vehicles                   | Municipal fire vehicles, including preemption capabilities through the cities and the municipalities within the Region.   | Existing      |
|                    | Municipal ITS Field Equipment             | Represents ITS field equipment owned and operated by the municipalities not expressly called out in this Architecture, but that are within the Region. May include CCTV, traffic sensors, traffic signals, etc.   | Planned       |
|                    | Municipal or County Permitting System     | Every city (including Austin) that has a commercial vehicle HAZMAT and oversize/overweight permitting process.  | Existing      |
|                    | Municipal Pavement Management System      | The Pavement Management System for all municipalities within the region (including Cedar Park, Georgetown, and San Marcos) that assists in storing, retrieving, analyzing, and reporting information to help with pavement-related decision-making processes. | Existing      |
|                    | Municipal Public Information Office       | The office provides the official interface between municipal traffic and maintenance departments and interests outside the departments such as the media.   | Existing      |
|                    | Municipal Public Safety Dispatch and PSAP | This is a general element that is meant to represent the 911 dispatch centers (dispatching police, fire and EMS) for the cities or municipalities within the Region that are not specifically called out in the architecture.                                 | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                      | <b>Element Name</b>                     | <b>Element Description</b>   | <b>Status</b> |
|---|---|--|---------------|
| Municipalities<br>(continued)           | Municipal Public Safety Vehicles        | Municipal emergency vehicles including police, fire, and EMS. Some preemption for fire and EMS vehicles.   | Existing      |
|   | Municipal PWD                           | The maintenance and construction division for the municipalities within the Region. Operates as the dispatch function for the municipal maintenance and construction vehicles.   | Existing      |
|   | Municipal PWD Vehicles                  | Maintenance and construction vehicles for the unnamed municipalities within the Region.  | Existing      |
|   | Municipal School Pager System           | School Zone warning system installed in the municipalities within the Region at school zones to warn drivers. System includes pagers, flashers and DMS installed at flasher locations. Pagers are used to download/upload messages to the DMS and to activate/deactivate the flashers. | Planned       |
|   | Municipal Traffic Database              | The archive data management system for traffic operations and traffic information for the municipalities within the Region.  | Existing      |
|   | Municipal Traffic Operations Center     | Municipal centers that operate traffic signal systems within the municipalities not specifically called out within the Region.   | Planned       |
|   | Municipal Website                       | Transportation information website for each municipality. In the future will include real-time construction, work zone, special event, incident, and traffic information.  | Planned       |
|   | Municipal/County Crash Records Database | Crash records database collected by the municipalities or counties within the Region.  | Existing      |
| NOAA                                    | National Weather Service                | Service for national, regional, and local weather information.   | Existing      |
| Other Regional Communications Providers | Other 800 MHz Communications Systems    | Intended to represent the other 800 MHz communications systems that are not specifically identified in the architecture.   | Planned       |
|   | Other 900 MHz Communications Systems    | Intended to represent the other 900 MHz communications systems that are not specifically identified in the architecture.   | Planned       |
| Private Concierge Service Provider      | Private Concierge Service Provider      | This element represents the private concierge (mayday) service providers in some private and commercial vehicles (e.g. OnStar).  | Existing      |
| Private Rail Operations                 | Rail Operations Centers                 | The dispatch centers for major railroads in the region (e.g. Union Pacific in Omaha, NE).  | Existing      |
|   | Rail Operators Rail Cars                | Rail-based commercial vehicles.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                  | <b>Element Name</b>                                      | <b>Element Description</b>  | <b>Status</b> |
|-------------------------------------|--|---|---------------|
| Private Rail Operations (continued) | Rail Operators Wayside Equipment                         | The rail operated equipment at highway rail intersections. Interconnect with traffic control.   | Existing      |
| Private Tow/Wrecker Providers       | Private Tow/Wrecker Dispatch                             | Dispatch function for privately owned tow or wrecker service. Based on a rotation list.   | Existing      |
|                                     | Private Tow/Wrecker Vehicles                             | The tow or wrecker vehicles in the Region.  | Existing      |
| Private Transportation Providers    | Private Transportation Provider Demand Response Vehicles | Demand response vehicles owned and operated by private transportation providers.  | Existing      |
|                                     | Private Transportation Provider Fixed Route Vehicles     | Fixed route vehicles that are owned and operated by private transportation providers.   | Existing      |
|                                     | Private Transportation Provider Kiosks                   | Kiosks that are owned and operated by private transportation providers. May include LED displays at bus stops, fare card purchasing, etc.   | Planned       |
|                                     | Private Transportation Provider Operations               | Private transportation providers that dispatch private taxis, shuttles, and Texas State University transportation services in the Region.   | Existing      |
|                                     | Private Transportation Provider Operations Website       | Local website for private transportation providers. May be able to request a demand response service from the agency website.   | Planned       |
| Private Travelers                   | Private Travelers Personal Computing Devices             | Includes personal and office computers, pagers, and handheld devices used by travelers to receive ITS information.  | Existing      |
|                                     | Private Vehicles   | Vehicles owned by private individuals in the area.  | Existing      |
| Public/Private Ambulance Providers  | Public/Private Ambulance Dispatch                        | Dispatch functions for public/private ambulance services within the Region.   | Existing      |
|                                     | Public/Private Ambulance Vehicles                        | The vehicles dispatched by public or private ambulance companies.   | Existing      |
| Radio Network Users                 | Radio Network Users                                      | This element represents the radio system for the Austin Region. The ultimate goal of this system is to provide interoperable voice and data radio communications to agencies in the Region. | Existing      |
| Regional Event Promoter             | Special Event Sponsors and Promoters                     | Promoters and sponsors of special events. They coordinate with traffic and emergency providers.   | Existing      |
| Regional Medical Centers            | Regional Medical Centers                                 | Medical facilities (public and private) found in the Region.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                               | <b>Element Name</b>  | <b>Element Description</b>   | <b>Status</b> |
|--|--|--|---------------|
| Regional Utility Companies                       | Regional Utility Companies                                     | Utility companies that operate in the region and coordinate with maintenance activities of the local jurisdictions for right of way issues or service issues. Could also be contacted in the event of an incident where a certain utility could be threatened. | Existing      |
| Rural Fire Departments                           | Rural Fire Department Dispatch                                 | Volunteer fire departments dispatch. Frequently this is done by the County Sheriff's office.   | Existing      |
|  | Rural Fire Department Vehicles                                 | Fire vehicles owned and operated by volunteer fire departments.  | Existing      |
| Service Agencies                                 | Service Agencies   | Agencies that help subsidize the funding for paratransit operations for special case citizens to ensure that these citizens have transportation to and from where they need to go (generally to medical appointments).   | Existing      |
| Statewide Toll Authorities                       | Statewide Toll Collection SmarHUB                              | HUB system operated by toll authorities around the state for the reconciliation of tolls between toll authorities.   | Existing      |
| TCEQ – Texas Commission of Environmental Quality | TCEQ Field Emissions Monitors                                  | Emissions monitoring field equipment owned and operated by the Texas Commission of Environmental Quality (TCEQ).   | Existing      |
|  | TCEQ Monitoring Operations Section                             | The section that is responsible for regional field equipment monitoring and testing.   | Existing      |
|  | TCEQ State Headquarters  | State headquarters for TCEQ that collects all emissions data from around the state and prepares a report for the federal government.   | Existing      |
| Texas DEM  | Texas DEM Disaster District Information System                 | The disaster information system run by the Division of Emergency Management in the event of a natural or man-made disaster.  | Planned       |
| Travis County Public Safety                      | Travis County Public Safety Vehicles                           | Sheriff, fire, or EMS vehicles owned and operated by Travis County. Onboard ITS systems include MDTs, AVL, cameras, etc.   | Existing      |
| Travis County Road Department                    | Travis County Equipment Repair Garage                          | The maintenance shop for all roadside equipment owned and operated by Travis County. Also provides maintenance to Travis County vehicles.  | Existing      |
|  | Travis County Maintenance and Construction Operations Dispatch | The maintenance and construction division for Travis County. Operates as the dispatch function for Travis County's maintenance and construction vehicles.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                        | <b>Element Name</b>   | <b>Element Description</b>  | <b>Status</b> |
|---|---|---|---------------|
| Travis County Road Department (continued) | Travis County Maintenance and Construction Vehicles               | Maintenance and construction vehicles for Travis County.  | Existing      |
| TxDOT                                     | TxDOT 511 System  | Planned statewide phone based traveler information system.  | Planned       |
|   | TxDOT BRINSAP   | TxDOT Bridge Inspection and Inventory System. Statewide system holding information regarding the inventory and inspection status of all bridges.  | Existing      |
|   | TxDOT Central Permitting Office                                   | The central permit office for TxDOT. Coordinates permits with other states and acts as a data repository for regional permits.  | Existing      |
|   | TxDOT Demand Response Transit Intake Center                       | The center owned and operated by TxDOT where residents can either call in or go online and request and pay for a demand responsive transit plan.  | Existing      |
|   | TxDOT Motor Carrier Routing Information                           | This on-line system allows motor carriers to view routing and roadway information, including load restricted bridges, low vertical clearance locations, metro lane closures, and permit restrictions. Bridge restriction information includes TxDOT as well as local agency bridges. Low vertical clearance, permit restriction, and metro lane closure information is available by TxDOT District. | Existing      |
|   | TxDOT Other District Maintenance Sections Dispatch                | Municipal, county, and TxDOT Maintenance sections in neighboring regions.   | Existing      |
|   | TxDOT Other District TMCs   | Traffic Management Centers in other TxDOT Districts (i.e. TranStar, Stratus, DalTrans, TransVision, TransVista and Pegasus).  | Existing      |
|   | TxDOT Other Permitting Systems                                    | Localized permitting systems in other TxDOT regions.  | Existing      |
|   | TxDOT Rest Areas/Visitor Centers/Truck Stops/Service Plaza Kiosks | This represents the rest areas and visitor centers with varied amenities that are existing or planned by TxDOT. Tourist information, emergency evacuation information, and general traffic information could be provided in the future.   | Planned       |
|   | TxDOT San Antonio District TMC (TransGuide)                       | TransGuide serves as the TMC for the San Antonio District and also initiates AMBER Alert procedures in the other TxDOT Districts at the direction of the DPS.   | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>    | <b>Element Name</b>                               | <b>Element Description</b>  | <b>Status</b> |
|-----------------------|---|---|---------------|
| TxDOT (continued)     | TxDOT Statewide Emergency Management Coordinator  | TxDOT representative at State EOC who communicates information to the TxDOT maintenance sections and TxDOT traffic sections.  | Existing      |
|                       | TxDOT Statewide Pavement Management System        | Statewide Pavement Management System that has an interface to the district Pavement Management System. This information is made available on the Internet.  | Existing      |
|                       | TxDOT Statewide Roadway Data Collection System    | Collects roadway data across the state for TxDOT.   | Existing      |
| TxDOT Austin District | TxDOT Austin District Area Engineers Office       | Construction design and supervision (schedules and plans) for the Austin District. Provide content to TMC's for maintenance and construction road status.   | Existing      |
|                       | TxDOT Austin District CCTV                        | CCTV owned and operated by TxDOT Austin.  | Existing      |
|                       | TxDOT Austin District DMS                         | DMS owned and operated by TxDOT Austin.   | Existing      |
|                       | TxDOT Austin District Field Sensors               | Traffic and vehicle sensors owned and operated by TxDOT Austin.   | Existing      |
|                       | TxDOT Austin District Flood Detectors             | Flood warning systems owned and operated by TxDOT that detect flood events at low water crossings on TxDOT roads. System includes monitoring and alerting functions, and may be interconnected with other roadway equipment such as DMS to alert motorists that a roadway is flooded ahead. | Planned       |
|                       | TxDOT Austin District HAR                         | Highway Advisory Radio (HAR) owned and operated by TxDOT Austin.  | Existing      |
|                       | TxDOT Austin District HERO Vehicles               | Roadway service patrol vehicles operated by TxDOT. May include MDTs, AVL, etc.  | Existing      |
|                       | TxDOT Austin District Historical Traffic Database | The archive data management system for traffic operations and traffic information for the TxDOT Austin District.  | Existing      |
|                       | TxDOT Austin District ITS Field Equipment         | ITS field equipment not specifically called out in the architecture. May include speed monitoring equipment, barrier system equipment, etc.   | Existing      |
|                       | TxDOT Austin District Lane Control Signals        | Lane control signals owned and operated by TxDOT Austin.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                   | <b>Element Name</b>  | <b>Element Description</b>   | <b>Status</b> |
|--------------------------------------|--|--|---------------|
| TxDOT Austin District<br>(continued) | TxDOT Austin District Maintenance and Construction Vehicles          | Maintenance and construction vehicles for the TxDOT Austin District.   | Existing      |
|                                      | TxDOT Austin District Maintenance Office                             | Office in charge of construction and maintenance operations for the TxDOT Austin district.   | Existing      |
|                                      | TxDOT Austin District Maintenance Sections Dispatch                  | TxDOT maintenance sections for Austin Region. Dispatches maintenance vehicles and equipment for maintaining road and ITS equipment owned by TxDOT.   | Existing      |
|                                      | TxDOT Austin District Mechanic Shop                                  | This facility provides repair and maintenance services for TxDOT maintenance vehicles and equipment (e.g. portable DMS).   | Existing      |
|                                      | TxDOT Austin District Pavement Management System                     | District Pavement Management System that assists in storing, retrieving, analyzing and reporting information to help with pavement-related decision-making processes.  | Existing      |
|                                      | TxDOT Austin District Public Information Office                      | The office provides the official interface between the TxDOT traffic and maintenance departments and interests outside the departments such as the media.  | Existing      |
|                                      | TxDOT Austin District Security Monitoring Field Equipment            | Security equipment owned and operated by the TxDOT Austin District.  | Planned       |
|                                      | TxDOT Austin District Public Transportation Management System (PTMS) | Maintains a Transit Vehicle Inventory for public transit vehicles that receive federal and state funds. Also able to generate ridership information such as cost per mile, revenues per mile, total revenues, etc. | Existing      |
|                                      | TxDOT Austin District Roadway Data Collection System                 | The roadway data collection system (including loop detectors and counters) archive management system owned and operated by the TxDOT Austin district.  | Existing      |
|                                      | TxDOT Austin District RWIS   | Road weather information systems (RWIS) that are owned and operated by TxDOT Austin.   | Planned       |
|                                      | TxDOT Austin District Security Monitoring Field Equipment            | Security equipment owned and operated by the TxDOT Austin District.  | Planned       |
|                                      | TxDOT Austin District Signal Server                                  | The traffic management center (server) that controls the traffic signal systems owned and operated by TxDOT Austin.  | Existing      |
| TxDOT Austin District Signals        | Traffic signals owned and operated by TxDOT Austin.                  | Existing   |               |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                   | <b>Element Name</b>                       | <b>Element Description</b>  | <b>Status</b> |
|--------------------------------------|---|---|---------------|
| TxDOT Austin District<br>(continued) | TxDOT Austin District TMC (CTECC)         | The traffic management center for the TxDOT Austin District. Controls all TxDOT ITS field equipment except signal systems. Located in CTECC, the Combined Transportation Emergency Communications Center.   | Existing      |
|                                      | TxDOT Austin District Website             | Transportation information website for the Austin district. In the future it will include real-time construction, work zone, special event, incident, and traffic information. (Handled by the Information Resource Office.)  | Existing      |
|                                      | TxDOT Austin District Work Zone Equipment | Work zone monitoring and alerting equipment owned by TxDOT Austin.  | Existing      |
| TxDOT Travel Division                | TxDOT Highway Conditions Reporting System | Provides detailed construction closures, detours, restrictions, permit and weather information. Compiled by District Public Information staff and area maintenance personnel. Accessible to the public on the internet at <a href="http://www.dot.state.tx.us/hcr/main.htm">www.dot.state.tx.us/hcr/main.htm</a> . The system provides access to information by route, county, or roadway condition. Includes contact information, Phone (800-452-9292) for construction, closures, hazards and detour information. | Existing      |
| TxDOT TTA Division                   | Toll Payment Device                       | A device by which travelers can pay a toll – a Regional Smartcard system.   | Existing      |
|                                      | TxDOT TTA CCTV                            | CCTV cameras owned and operated by Texas Turnpike Authority.  | Planned       |
|                                      | TxDOT TTA Customer Service Center         | The customer service center for the Texas Turnpike Authority. This represents the backend systems of the Turnpike.  | Existing      |
|                                      | TxDOT TTA DMS                             | DMS owned and operated by Texas Turnpike Authority.   | Planned       |
|                                      | TxDOT TTA Field Sensors                   | Field sensors (for traffic) owned and operated by Texas Turnpike Authority.   | Planned       |
|                                      | TxDOT TTA Toll Collection SmartHUB        | A HUB device owned and operated by Texas Turnpike Authority that relays toll collection information to toll authorities throughout the region for reconciliation of tolls.  | Planned       |
|                                      | TxDOT TTA Toll Collection Website         | Website for future Texas Turnpike Authority toll road.  | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| <b>Stakeholder</b>                 | <b>Element Name</b>                               | <b>Element Description</b>  | <b>Status</b> |
|------------------------------------|---|---|---------------|
| TxDOT TTA Division<br>(continued)  | TxDOT TTA Toll Plazas                             | The toll plazas on the Texas Turnpike. The plazas may have automated toll collection systems, tag readers, or other ITS devices.  | Existing      |
| University of Texas                | UT Events Office                                  | The event office at the University of Texas that coordinates with regional traffic systems for large events (football games, etc.).   | Existing      |
|                                    | UT Police Dispatch                                | The police dispatch for the University Police Department.   | Existing      |
|                                    | UT Police Vehicles                                | Police vehicles owned and operated by the University of Texas at Austin. Includes the ITS equipment installed on the cruisers (AVL, MDTs, etc.).  | Existing      |
| USGS                               | USGS Flood Monitoring Center                      | Flood warning devices owned and operated by the USGS in waterways in the Region including the Colorado River, Bull Creek, Barton Creek, and Onion Creek among numerous others.  | Existing      |
|                                    | USGS Flood Monitoring Devices                     | Flood warning devices owned and operated by the USGS.   | Existing      |
| Williamson County<br>Public Safety | Williamson County Emergency Communications Center | The local 911 dispatch center (rural) for Williamson County that dispatched Williamson County Sheriff, fire, EMS, rural fire department, and all municipal public safety vehicles). Has coordinated computer-aided dispatch (CAD) system with City of Round Rock. | Existing      |
|                                    | Williamson County EOC                             | The Williamson County EOC.  | Planned       |
|                                    | Williamson County Public Safety Vehicles          | Sheriff, fire, or EMS vehicles owned and operated by Williamson County. Onboard ITS systems include MDTs, AVL, cameras, etc.  | Existing      |
|                                    | Williamson County Radio Systems                   | The radio communications network that is owned and operated by Williamson County. Radio networks used to transfer voice and data communications between agencies.   | Existing      |

**Table 3 – Austin Inventory of ITS Elements (continued)**

| Stakeholder                       | Element Name  | Element Description   | Status   |
|-----------------------------------|---|---|----------|
| Williamson County Road Department | Williamson County Emergency Communications Center         | The local 911 dispatch center (rural) for Williamson County that dispatched Williamson County Sheriff, fire, EMS, rural fire department, and all municipal public safety vehicles). Has coordinated CAD system with City of Round Rock. | Existing |
|                                   | Williamson County EOC                                     | The Williamson County EOC.  | Planned  |
|                                   | Williamson County Public Safety Vehicles                  | Sheriff, fire, or EMS vehicles owned and operated by Williamson County. Onboard ITS systems include MDTs, AVL, cameras, etc.  | Existing |
|                                   | Williamson County Radio Systems                           | The radio communications network that is owned and operated by Williamson County. Radio networks used to transfer voice and data communications between agencies.   | Existing |
|                                   | Williamson County Equipment Repair Facility               | The maintenance shop for all roadside equipment owned and operated by Williamson County. Also provides maintenance to Williamson County vehicles.   | Existing |
|                                   | Williamson County Maintenance and Construction Operations | The maintenance and construction division for Williamson County. Operates as the dispatch function for Williamson County maintenance and construction vehicles.   | Existing |
|                                   | Williamson County Maintenance and Construction Vehicles   | Maintenance and construction vehicles for Williamson County.  | Existing |

### 3.3.3 Top Level Regional System Interconnect Diagram

A system interconnect diagram, or “sausage diagram” (shown previously in **Figure 3**), shows the systems and primary interconnects in the Region. The National ITS Architecture interconnect diagram has been customized for the Austin Region based on the system inventory and information gathered from the stakeholders. **Figure 4** summarizes the existing, planned, and future ITS elements for the Austin Region in the context of a physical interconnect. Subsystems and elements specific to the Region are called out in the boxes surrounding the main interconnect diagram, and these are color-coded to the subsystem to which they are associated.

## 3.4 Market Packages

Upon completion of the system inventory, the next step in the development of the architecture was to identify the transportation services that are important to the Austin Region. In the National ITS Architecture, services are referred to as market packages. Market packages can include several stakeholders and elements that work together to provide a service in the Region. Examples of market packages from the National ITS Architecture include Network Surveillance, Traffic Information Dissemination, and Transit Vehicle Tracking. There are currently a total of 85 market packages identified in the National ITS Architecture Version 5.1

The market packages are grouped together into eight ITS service areas: Traffic Management, Emergency Management, Maintenance and Construction Management, Public Transportation Management, Commercial Vehicle Operations, Traveler Information, Archived Data Management, and Vehicle Safety. As mentioned earlier in Section 3.1, Vehicle Safety was not included in the Austin Regional ITS Architecture because implementation of those market packages would be by private sector automobile and information service providers.

### 3.4.1 Selection and Prioritization of Market Packages

In the Austin Region, the National ITS Architecture market packages were reviewed by the stakeholders and selected based on the relevance of the service that the market package could provide to the Region. Fifty-one market packages were selected from the National ITS Architecture for implementation in the Region. They are identified in **Table 4**. Stakeholders prioritized the selected market packages during the workshop and the table organizes the market packages into service areas and priority groupings.

In addition to the market packages selected from the National ITS Architecture, stakeholders in Austin also developed a customized market package that centers the voice and data transfer through the radio network. This market package is presented in greater detail in section 3.4.4.

TxDOT is leading a separate effort to develop and implement the CVISN program. CVISN addresses commercial vehicle operations, including ITS, on a statewide level and includes such applications as electronic clearance, safety enforcement, and registration. Unless a specific need was identified in the Austin Region that could be addressed locally, the commercial vehicle operations market packages were not selected and instead will be covered in the CVISN effort to ensure consistency.

In several cases, there are multiple stakeholders in the Region that provide the same service at different levels. For example, Traffic Information Dissemination (ATMS06) is provided on interstates and controlled access state facilities by TxDOT using DMS. In the future the City of Austin could also deploy DMS on arterials. The market package status is identified

as existing, planned, or future for each of the primary stakeholders in the Region. In many cases market packages classified as existing might still need to be enhanced to increase the service that the market package provides and establish all of the elements associated with it.

Upon selecting the market packages that were applicable for the Region, stakeholders then reviewed each market package and the elements that could be included to customize it for the Region. This customization is discussed further in the following section.

### 3.4.2 Customized Market Packages

The market packages in the National ITS Architecture were customized to reflect the unique systems, subsystems, and terminators in the Austin Region. Each market package is shown graphically, with the market package name, local agencies involved, and desired data flows included. Market packages represent a service that will be deployed as an integrated capability.

**Figure 5** is an example of an advanced traffic management system (ATMS) market package for Surface Street Control that has been customized for the Region. This market package shows the two subsystems, Traffic Management and Roadway, and the associated entities (City of Austin TMC and City of Austin Traffic Signals, School Programmable Flasher System, CCTV and ITS Field Equipment) for surface street control in the City of Austin. Data flows between the subsystems indicate what information is being shared.

Market packages that were customized for the Austin Region are shown in **Appendix C**. These market packages are also included on the Austin Regional ITS Architecture web site by selecting the “Market Packages by Functional Area” button. On this section of the site, market packages are grouped by functional area (Traffic Management, Maintenance and Construction, Public Transportation, etc.), and each of the customized market packages can be viewed by clicking on the market package number under each area heading. It is important to note that while the market package table on the web site shows all of the available market packages from the National ITS Architecture, only those selected for the Austin Region include diagrams. On the web site these selected market packages are highlighted in the table.

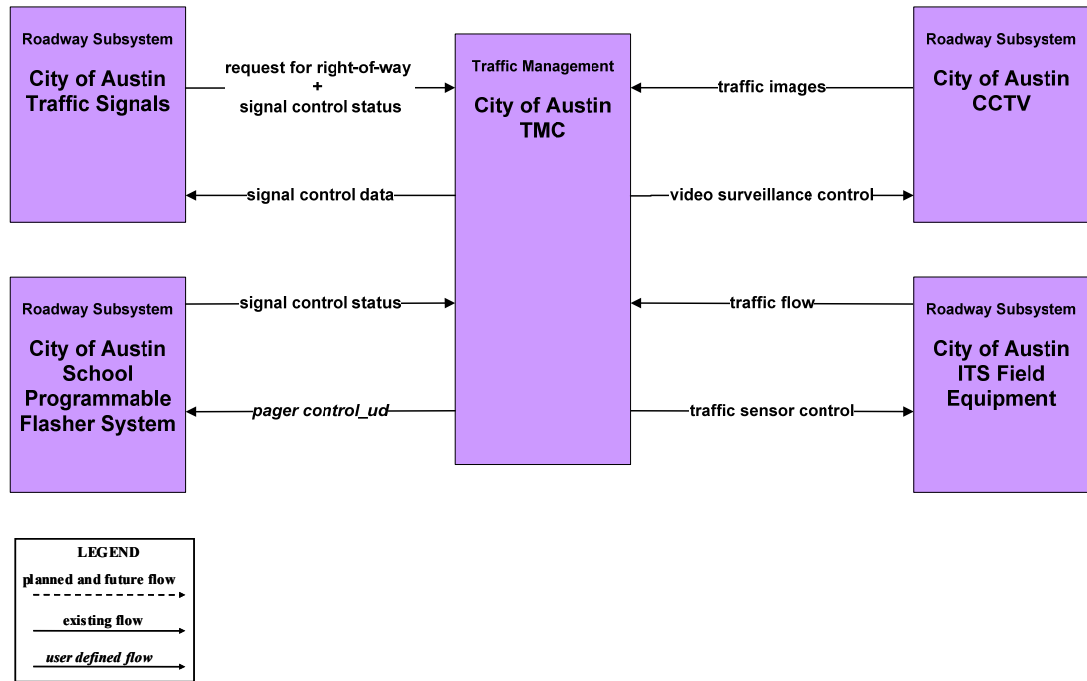

Figure 5 – Example Market Package Diagram: Surface Street Control

### 3.4.3 Regional ITS Needs and Customized Market Packages

Input received from stakeholders at the Kickoff Workshops and through individual stakeholder meetings provided valuable input for the market package customization process. The specific needs identified are included in **Table 5**. The table also identifies which market package documents the ITS need.

Table 5 – Regional ITS Needs and Corresponding Market Packages

| ITS Need   | Identifying Agency                                  | Implementing Agency                                       | Market Package |
|--|---|---|----------------|
| <b>Traffic Management</b>  |   |   |                |
| Need improved signal timing and coordination                                       | Burnet County, City of Marble Falls, City of Burnet | TxDOT   | ATMS03         |
| Need vehicle detection at key locations  | Caldwell County                                     | TxDOT   | ATMS01         |
| Need improved signal timing and coordination                                       | Caldwell County                                     | TxDOT   | ATMS03         |
| Need to share TxDOT detector data with the City of Austin                          | City of Austin                                      | City of Austin, TxDOT                                     | ATMS07         |
| Need to expand video sharing between TxDOT and the City of Austin                  | City of Austin                                      | City of Austin, TxDOT                                     | ATMS07         |
| Need real time information from public safety answering points regarding incidents | City of Austin                                      | City of Austin, City of Austin/Travis County 911 Dispatch | ATMS08         |

**Table 5 – Regional Needs and Corresponding Market Packages (continued)**

| ITS Need  | Identifying Agency  | Implementing Agency                                  | Market Package             |
|---|---------------------|--|----------------------------|
| <b>Traffic Management (continued)</b>   |                     |  |                            |
| Need Cedar Park Traffic Operations Center to control signal system and other future ITS devices   | City of Cedar Park  | City of Cedar Park                                   | ATMS01<br>ATMS03<br>ATMS06 |

**Table 5 – Regional Needs and Corresponding Market Packages (continued)**

| Need   | Identifying Agency                               | Implementing Agency                                       | Market Package |
|--|--|---|----------------|
| <b><i>Transit Operations (continued)</i></b>   |  |   |                |
| Need passenger counters  | Texas State University Transportation Department | Texas State University Transportation Department          | APTS4          |
| Need real-time bus arrival information to post on the internet and at transit stations and stops   | Texas State University Transportation Department | Texas State University Transportation Department          | APTS1<br>APTS2 |
| <b><i>Traveler Information</i></b>   |  |   |                |
| Need DMS on US 281 (potentially as far away as the US 281/SH 71 intersection) for information on the segment between Marble Falls and Burnet. Accidents on this stretch have a significant impact on traffic and there is also an upcoming project to replace the bridge over the Colorado River. Also consider HAR. | Burnet County                                    | TxDOT   | ATMS06         |
| Need to provide advance notice of flooded roadways to facilitate detouring   | Burnet County                                    | Burnet County, TxDOT                                      | ATMS06         |
| Need advance traveler information for FM 1431 heading east to Austin in the event of flooding or an accident.  | Burnet County                                    | TxDOT   | ATMS06         |
| Need DMS on I-10 for traveler information, especially in case of an evacuation   | Caldwell County                                  | TxDOT   | ATMS06         |
| Need to add DMS to arterials   | City of Austin                                   | City of Austin  | ATMS06         |
| Need DMS on FM 1431 near US 183 and on US 183 southbound north of New Hope so that vehicles can be detoured to US 183A if there is an incident on US 183   | City of Cedar Park                               | City of Cedar Park, TxDOT                                 | ATMS06         |
| Need CCTV and vehicle detection on the Southwest Bypass and Inner Loop   | City of Georgetown                               | City of Georgetown  | ATMS01         |
| Need DMS on I-35 for travel time and potential detour information  | City of Georgetown                               | TxDOT   | ATMS06         |
| Need DMS on Southwest Bypass   | City of Georgetown                               | City of Georgetown  | ATMS06         |
| Need portable DMS  | City of Georgetown                               | City of Georgetown  | ATMS06         |
| Need DMS at several locations within the city including near the Dell Diamond.   | City of Round Rock                               | TxDOT   | ATMS06         |
| Need DMS on I-35 in the vicinity of Exit 200 (outlet malls)  | City of San Marcos<br>Hays County                | TxDOT   | ATMS06         |
| Need to coordinate with the TXDOT Austin District and TxDOT San Antonio Districts to provide improved traveler information   | City of San Marcos<br>Hays County                | City of San Marcos, TxDOT<br>Austin, TxDOT<br>San Antonio | ATMS07         |
| Need improved traveler information about conditions on RR 12 for Wimberley Trade Days  | Hays County                                      | TxDOT Austin  | ATMS07         |

**Table 5 – Regional Needs and Corresponding Market Packages (continued)**

| Need   | Identifying Agency  | Implementing Agency          | Market Package    |
|--|---------------------|------------------------------|-------------------|
| <b><i>Traveler Information (continued)</i></b>   |                     |                              |                   |
| Need DMS on Brodie Lane, Anderson Mill Road, and Southwest Parkway to provide travel time and incident information   | Travis County       | Travis County                | ATMS06            |
| Need DMS on state routes throughout the County for traveler information  | Travis County       | TxDOT                        | ATMS06            |
| Need to expand freeway management system through the implementation of additional DMS                                | TxDOT               | TxDOT                        | ATMS06            |
| Need to expand freeway management system through the implementation of additional CCTV cameras and vehicle detection | TxDOT               | TxDOT                        | ATMS01            |
| Need to add DMS for traveler information   | TxDOT TTA           | TxDOT                        | ATMS06            |
| Need to add vehicle detection to toll roads  | TxDOT TTA           | TxDOT                        | ATMS01            |
| Need to consider adding CCTV cameras for surveillance  | TxDOT TTA           | TxDOT                        | ATMS01            |
| Need DMS on SH 71 prior to Bee Caves Road  | Village of Bee Cave | TxDOT                        | ATMS06            |
| <b><i>Archive Data Management</i></b>  |                     |                              |                   |
| Need to bring data from ITS deployments together to allow it to be used for planning purposes                        | TxDOT, CAMPO        | TxDOT, City of Austin, CAMPO | AD1<br>AD2<br>AD3 |

#### 3.4.4 Radio Communications Market Package

In addition to the 85 market packages covered in the National ITS Architecture, a user defined market package was also developed for the Austin Regional ITS Architecture to address the need for improved radio communications. Radio communications are essential to many of the incident management, emergency management, maintenance, and transit operations in the Region. In addition to voice, stakeholders envisioned the use of radio for data transmittal throughout the Region. Although the technology used to transmit data, such as fiber or microwave, is not generally shown in a regional ITS architecture, due to the importance of radio and the need for interoperability stakeholders felt it was important to clearly demonstrate the desired interoperability in the Region by creating a market package specific to radio communications.

In Texas, a Statewide Interagency Radio Work Group has worked together to identify solutions to the radio interoperability challenge. The group adopted the Association of Public Safety Communications Officials (APCO) International Project 25 standards. Project 25 is not a single standard but rather a number of individual protocols that can be mixed and matched to meet the individual needs of an agency. The key is that any radios using the Project 25 standards should be able communicate with any other Project 25 radio regardless of the manufacturer. The Texas legislature has required that future radio equipment purchased by the state use Project 25 radios.

Local governments are not required to use the Project 25 radios; however, all of the local agencies that participated in interviews as part of the Regional ITS Architecture process expressed a desire for interoperability between their radio systems and other systems in the

Region. Cost of upgrading their system as well as the increased cost of the digital radio that are Project 25 compliant will be the greatest obstacles in achieving interoperability between all agencies.

In order to reflect the desire for interoperability of radio systems between all agencies in the Region, the Radio Communications market package was developed for the Austin Regional ITS Architecture. This market package is represented in **Figure 6** and **Figure 7**. The Radio Communications market package includes the primary radio systems currently operating in the Region, those belonging to the City of Austin/Travis County, Hays County, LCRA, and Williamson County. The interface between these systems and other systems could be the Project 25 standards that allow compatibility between all agencies. Stakeholders throughout the Region have not agreed that this is the standard they will follow, only that they wish to have an interoperable radio system. The Radio Network market package also shows the need for radio systems to support both voice and data transfer on the radio system.

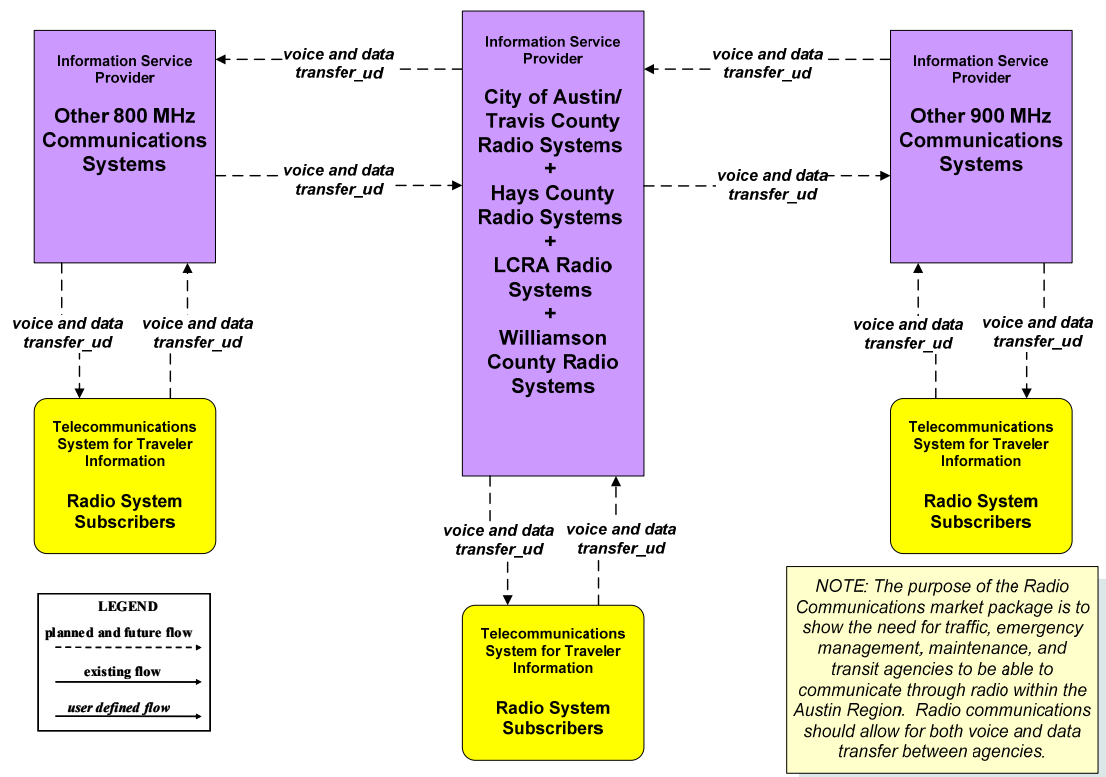

Figure 6 – Radio Communications Market Package (Part 1 of 2)

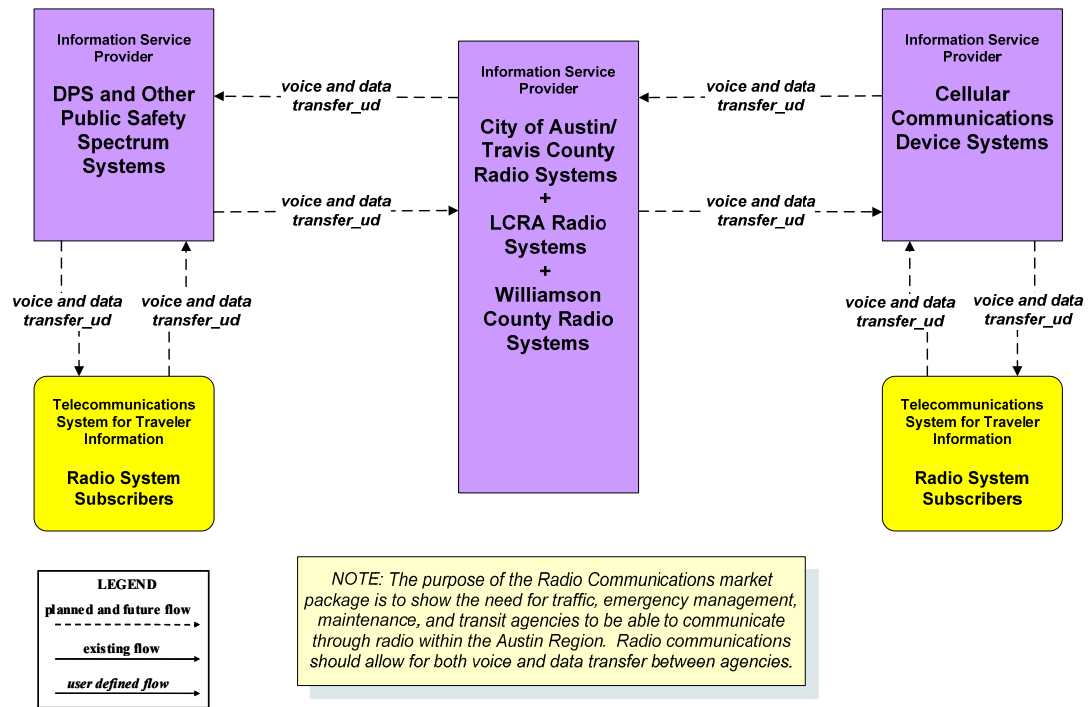

Figure 7 – Radio Communications Market Package (Part 2 of 2)

### 3.5 Architecture Interfaces

While it is important to identify the various systems and stakeholders as part of a regional ITS, a primary purpose of the architecture is to identify the connectivity between transportation systems in the Austin Region. The interconnect diagram shown previously in **Figure 4** showed the high-level relationships of the subsystems and terminators in the Austin Region and the associated local projects and systems. The customized market packages represent services that can be deployed as an integrated capability, and the market package diagrams show the information flows between the subsystems and terminators that are most important to the operation of the market packages. How these systems interface with each other is an integral part of the overall ITS architecture.

#### 3.5.1 Element Connections

There are a large number of different elements identified as part of the Austin Regional ITS Architecture. These elements include TMCs, transit vehicles, dispatch systems, emergency management agencies, media outlets, and others—essentially, all of the existing and planned physical components that contribute to the regional ITS. Interfaces have been identified for each element in the Austin Regional ITS Architecture, and each element has been mapped to those other elements with which it must interface.

An example of one of the context diagrams is shown in **Figure 8**. This graphic shows the TxDOT Austin District CCTV and the existing and planned interfaces with other elements throughout the Region. These interfaces are shown as existing or planned. The context diagrams are included on the Regional ITS Architecture web site and can be accessed from either the “Inventory by Stakeholder” section or the “Inventory by Entity” section. When an element is selected from either of these areas you can choose to view the context

diagram from the element description page that is displayed. The context diagrams are included in **Appendix D**.

### 3.5.2 *Data Flows Between Elements*

Architecture flows between the subsystems and terminators define the specific information (data) that is exchanged between subsystems and terminators. Each architecture flow has one or more data flows that specify what information is exchanged and the direction of the exchange. These data flows could be requests for information, alerts and messages, status requests, broadcast advisories, event messages, confirmations, electronic credentials, and other key information requirements. These architecture flows define the interface requirements between the various elements in the Austin Regional ITS Architecture.

An example of the architecture flows between two elements is shown in **Table 6**. In this summary, the flows between the TxDOT Austin District TMC and the City of Austin/Travis County 911 Dispatch Center show the information that could go between the elements. Similar to the interfaces, architecture flows are also defined as existing or planned.

Each of these individual element data flow summaries can be accessed on the project web site at [www.consysfec.com](http://www.consysfec.com) by selecting the link to Texas Regional, then the link to the Austin Region, and then either the “ITS Inventory”, “Inventory by Stakeholder”, or “Inventory by Entity” button. Click on one of the inventory buttons and select any of the elements from the column on the right. This will display an element description page. On this page the interface list contains each element in the architecture that the chosen element shares information with. Selecting the desired element will display a table of data flows similar to that in **Table 6**. Selecting the Context Diagram button will display a context diagram similar to **Figure 8**. A complete set of context diagrams for all elements is included in **Appendix D**. For those elements with numerous interfaces, such as the City of Austin TMC, the context diagram is difficult to read so a table with a listing of all of the flows selected for use in the architecture is also included.

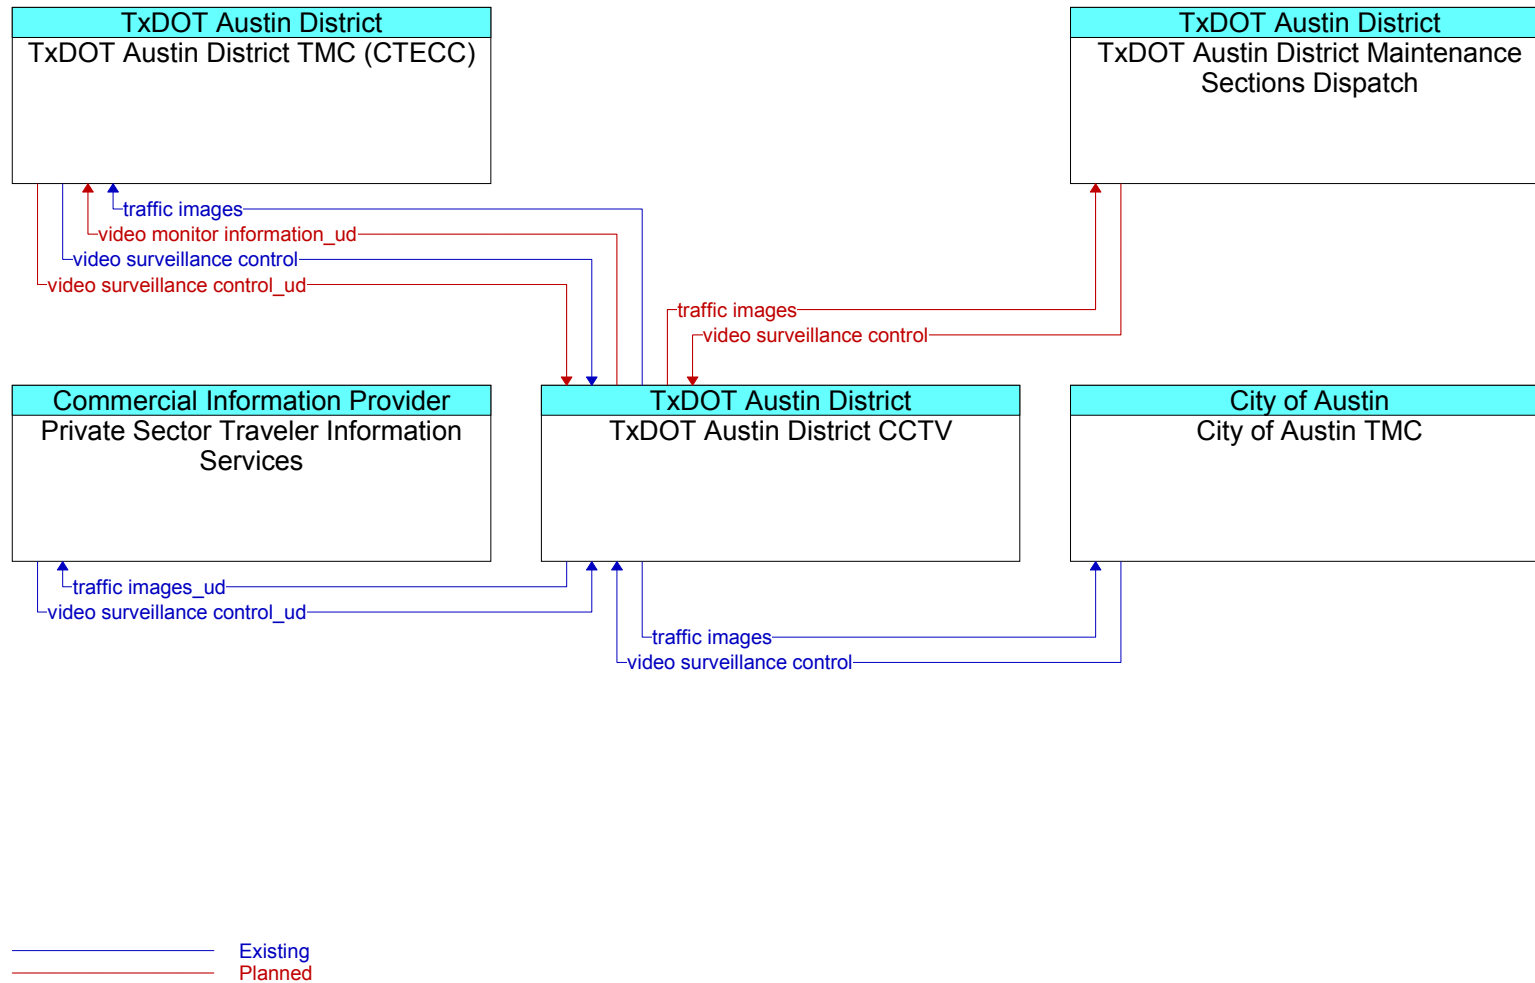

Figure 8 – Example Context Diagram: TxDOT Austin District CCTV

**Table 6 – Example Data Flow Table**

| Source   | Architecture Flows                  | Destination  |
|--|-------------------------------------|--|
| City of Austin/Travis County 911 Dispatch Center (CTECC) | Threat information coordination (P) | TxDOT Austin District TMC (CTECC)                        |
|  | Incident report (P)                 |  |
|  | Resource request (E)                |  |
|  | Remote surveillance control (E)     |  |
|  | Incident response status (E)        |  |
|  | Incident information (E)            |  |
| TxDOT Austin District TMC (CTECC)                        | Flood warning_ud (P)                | City of Austin/Travis County 911 Dispatch Center (CTECC) |
|  | Threat information coordination (P) |  |
|  | Incident report (P)                 |  |

|  | Traffic violation notification (P)  |  |

## 4. APPLICATION OF THE REGIONAL ITS ARCHITECTURE

Once a region has identified the desired components of ITS for their area and established which agencies and systems need to be connected, the structure of the National ITS Architecture assists with the region's planning and implementation. This section addresses the application of the Regional ITS Architecture in the Austin Region. The National ITS Architecture provides recommendations for standards and functional requirements that should be considered when implementing ITS elements. In addition, an operational concept has been developed for the Region and documents the roles and responsibilities of stakeholders in the operation of the regional ITS. The implementation of ITS in the Austin Region will likely require interagency agreements. Potential agreements have been identified based on the desired data flows identified in the Austin Region. The ITS Architecture and ITS Deployment Plan developed as part of this process will be incorporated in to the existing planning process for the Region to ensure that the maximum benefit is realized from the development effort.

### 4.1 Functional Requirements

Functions are a description of what the system has to do. In the National ITS Architecture, functions are defined at several different levels, ranging from general subsystem descriptions through somewhat more specific equipment package descriptions to Process Specifications that include substantial detail. Guidance from the United States Department of Transportation (USDOT) on developing a Regional ITS Architecture recommends that each Region determine the level of detail of the functional requirements for their Region. In the Austin Region, it is recommended that the development of detailed functional requirements such as the "shall" statements included in Process Specifications for a system be developed at the project level. These detailed "shall" statements identify all functions that a project or system needs to perform.

For the Austin Regional ITS Architecture, functional requirements have been identified at two levels. The customized market packages, discussed previously in Section 3.4.2, describe the services that ITS needs to provide in the Region and the architecture flows between the elements. These market packages and data flows describe what the ITS system in the Austin Region has to do and the data that needs to be shared among elements.

At a more detailed level, functional requirements for the Austin Region are described in terms of functions that each element in the architecture performs or will perform in the future. **Appendix E** contains a table that summarizes the functions by element.

### 4.2 Standards

Standards are an important tool that will allow efficient implementation of the elements in the Austin Regional ITS Architecture over time. Standards facilitate deployment of interoperable systems at local, regional, and national levels without impeding innovation as technology advances, vendors change, and as new approaches evolve. The USDOT's ITS Joint Program Office is supporting Standards Development Organizations (SDOs) with an extensive, multi-year program of accelerated, consensus-based standards development to facilitate successful ITS deployment in the United States. Standards have been developed to support many of the physical subsystem architecture flows identified in the National ITS Architecture. **Table 7** identifies each of the ITS standards that could apply to the Austin Regional ITS Architecture. These standards are based on the physical subsystem architecture flows previously identified in Section 3.5.2.

Three additional standards that are not based on the National ITS Architecture physical subsystems architecture flows have also been included.

- TxDOT Center-to-Center: This standard has been developed by TxDOT to support center-to-center communications for traffic information.
- APCO Project 25 (P25): This standard has been developed by the Association of Public Safety Communications Officials International to support interoperability of radio systems.
- Department of Justice Global Justice Data Dictionary (Global JXDD): This standard has been developed by the Department of Justice and is used for interoperability between CAD systems. This data dictionary differs from the data dictionary developed by the Institute of Traffic Engineers for sharing incident information but is required by the Department of Justice if they are funding a project.

**Table 7 – Austin Applicable ITS Standards**

| SDO             | Document ID             | Title  |
|-----------------|-------------------------|--|
| AASHTO/ITE/NEMA | NTCIP 1102              | Octet Encoding Rules (OER) Base Protocol   |
|                 | NTCIP 1104              | Center-to-Center Naming Convention Specification   |
|                 | NTCIP 1105              | CORBA Security Service Specification   |
|                 | NTCIP 1106              | CORBA Near-Real Time Data Service Specification  |
|                 | NTCIP 2104              | Ethernet Subnetwork Profile  |
|                 | NTCIP 2202              | Internet (TCP/IP and UDP/IP) Transport Profile   |
|                 | NTCIP 2303              | File Transfer Protocol (FTP) Application Profile   |
|                 | NTCIP 2304              | Application Profile for DATEX-ASN (AP-DATEX)   |
|                 | NTCIP 2305              | Application Profile for CORBA (AP-CORBA)   |

### 4.3 Operational Concepts

An Operational Concept documents each stakeholder's current and future roles and responsibilities in the operation of the regional ITS. The Operational Concept documents these roles and responsibilities across a range of transportation services as grouped in the Operational Concepts section of Turbo Architecture. The services covered are:

- **Arterial Management** – The development of signal systems that react to changing traffic conditions and provide coordinated intersection timing over a corridor, an area, or multiple jurisdictions.
- **Highway Management** – The development of systems to monitor freeway (or tollway) traffic flow and roadway conditions, and provide strategies such as ramp metering or lane access control to improve the flow of traffic on the freeway. Includes systems to provide information to travelers on the roadway.
- **Incident Management** – The development of systems to provide rapid and effective response to incidents. Includes systems to detect and verify incidents, along with coordinated agency response to the incidents.
- **Emergency Management** – The development of systems to provide emergency call taking, public safety dispatch, and emergency operations center operations.
- **Maintenance and Construction Management** – The development of systems to manage the maintenance of roadways in the Region, including winter snow and ice clearance. Includes the managing of construction operations.
- **Transit Management** – The development of systems to more efficiently manage fleets of transit vehicles or transit rail. Includes systems to provide transit traveler information both pre-trip and during the trip.
- **Electronic Payment** – The development of electronic fare payment systems for use by transit and other agencies (e.g., parking).
- **Commercial Vehicle Operations** – The development of systems to facilitate the management of commercial vehicles (e.g. electronic clearance).
- **Traveler Information** – The development of systems to provide static and real time transportation information to travelers.
- **Archive Data Management** – The development of systems to collect transportation data for use in non-operational purposes (e.g., planning and research).

**Table 8** identifies the roles and responsibilities of key stakeholders for a range of transportation services.

**Table 8 – Austin Stakeholder Roles and Responsibilities**

| Transportation Service  | Stakeholder  | Roles/Responsibilities   |
|---|--|--|
| Traffic Signal Control  | TxDOT  | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on state owned arterials and City streets.  |
|   |  | Provide traffic images and video surveillance control to private sector traveler information systems.  |
|   |  | Perform speed monitoring on state owned arterials.   |
|   |  | Operate traffic signal systems on state owned arterials, including traffic signals, sensor systems, and pedestrian crossing signals.   |
|   |  | Provide traffic information reports to regional and private information service providers as well as the Texas 511 System (through the highway conditions reporting system [HCRS]).                      |
|   |  | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media. Provide traffic information to travelers through state owned DMS. |
|   |  | Coordinate traffic information with the state's other Regional TMCs and the local city and municipality TMCs/TOCs.   |
|   |  | Coordinate highway rail intersection (HRI) signal adjustments with regional and private Rail Operators.  |
|   |  | Operate and control reversible lanes on state arterials or toll roads.   |
|   |  | Provide speed monitoring on state owned arterials or toll roads.   |
|   |  | Provide automated flood detection and road closures (as well as alerting the traveling public through DMS) on state owned arterials.   |
|   | Provide security monitoring of critical infrastructure for the State, and relay threat information to regional emergency management providers as well as other regional and municipal/local TMCs/TOCs. |  |
|   | Provide emergency signal preemption for the City and County public safety vehicles as well as DPS vehicles.  |  |
|   | City of Austin   | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on City streets.  |
|   |  | Provide traffic images and video surveillance control to private sector traveler information systems.  |
|   |  | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and CCTV detection devices.   |
|   |  | Operate programmable flasher systems for City schools.   |
| Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System. |  |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service  | Stakeholder   | Roles/Responsibilities   |
|---|---|--|
| Traffic Signal Control (continued)  | City of Austin (continued)  | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media (through the City's Public Information Office [PIO]). Provide traffic information to travelers through City's DMS. |
|   | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.   |  |
|   | Coordinate HRI signal adjustments with regional and private Rail Operators.   |  |
|   | Operate and control reversible lanes on City owned streets.   |  |
|   | Provide speed monitoring on City owned streets.   |  |
|   | Provide automated flood detection and road closures on City owned streets.  |  |
|   | Provide security monitoring of critical infrastructure for the City, and relay threat information to regional emergency management providers as well as regional and municipal/local TMCs/TOCs. |  |
|   | Provide transit signal priority for regional fixed route transit vehicles.  |  |
|   | Provide emergency signal preemption for the City's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances.   |  |
|   | City of Cedar Park  | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on City streets.  |
|   |   | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and pedestrian crossing systems.  |
|   |   | Operate programmable flasher systems for City schools.   |
|   |   | Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System.  |
|   |   | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media (through the City's PIO). Provide traffic information to travelers through City's DMS.                             |
|   |   | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.  |
|   |   | Coordinate HRI signal adjustments with regional and private Rail Operators.  |
| Provide emergency signal preemption for the City's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances. |   |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service             | Stakeholder        | Roles/Responsibilities   |
|------------------------------------|--------------------|--|
| Traffic Signal Control (continued) | City of Georgetown | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on City streets.  |
|                                    |                    | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and pedestrian crossing systems.  |
|                                    |                    | Operate programmable flasher systems for City schools.   |
|                                    |                    | Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System.  |
|                                    |                    | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media (through the City's PIO). Provide traffic information to travelers through City's DMS. |
|                                    |                    | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.  |
|                                    |                    | Coordinate HRI signal adjustments with regional and private Rail Operators.  |
|                                    |                    | Provide automated flood detection and road closures on City owned streets.   |
|                                    |                    | Provide emergency signal preemption for the City's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances.  |
|                                    | City of Round Rock | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on City streets.  |
|                                    |                    | Provide traffic images to the regional DOT office.   |
|                                    |                    | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and pedestrian crossing systems.  |
|                                    |                    | Operate programmable flasher systems for City schools.   |
|                                    |                    | Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System.  |
|                                    |                    | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media (through the City's PIO). Provide traffic information to travelers through City's DMS. |
|                                    |                    | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.  |
|                                    |                    | Coordinate HRI signal adjustments with regional and private Rail Operators.  |
|                                    |                    | Provide emergency signal preemption for the City's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service  | Stakeholder        | Roles/Responsibilities   |
|---|--------------------|--|
| Traffic Signal Control (continued)  | City of San Marcos | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on City streets.  |
|   |                    | Provide traffic images to the regional DOT office.   |
|   |                    | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and pedestrian crossing systems.  |
|   |                    | Operate programmable flasher systems for City schools.   |
|   |                    | Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System.  |
|   |                    | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media (through the City's PIO). Provide traffic information to travelers through City's DMS. |
|   |                    | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.  |
|   |                    | Coordinate HRI signal adjustments with regional and private Rail Operators.  |
|   | Municipalities     | Provide emergency signal preemption for the City's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances.  |
|   |                    | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on municipality streets.  |
|   |                    | Operate traffic signal systems on City owned streets, including traffic signals, sensor systems, and pedestrian crossing systems.  |
|   |                    | Operate programmable flasher systems for City schools.   |
|   |                    | Provide traffic information reports to regional information service providers, private information service providers, and the Texas 511 System.  |
|   |                    | Provide traffic information to regional agencies including transit, emergency management, maintenance and construction, and the media. Provide traffic information to travelers through City's DMS.                          |
|   |                    | Coordinate traffic information with the state's Regional TMC and the local city and municipality TMCs/TOCs.  |
|   |                    | Coordinate HRI signal adjustments with regional and private Rail Operators.  |
| Provide emergency signal preemption for the municipality's Fire and EMS vehicles, the county's public safety vehicles, and public/private ambulances. |                    |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service        | Stakeholder                                     | Roles/Responsibilities   |
|-------------------------------|---|--|
| Highway Management            | TxDOT   | Operate network surveillance equipment (CCTV cameras, field sensors, etc.) on State owned highways.  |
|                               |   | Operate lane controls on state owned highways.   |
|                               |   | Provide traffic information to regional transportation agencies and the general public through traffic information devices (DMS, Highway Advisory Radio, HCRS, Texas 511, etc.).               |
|                               |   | Provide HOV lane management for state owned highways. Provide travelers with real-time pricing information for HOV lanes via agency DMS.   |
|                               |   | Provide security monitoring of critical infrastructure for the State.  |
|                               |   | Coordinate traffic information and traffic control with other regional TMCs and the statewide TMC.   |
| Incident Management (Traffic) | Texas Department of Public Safety (DPS)         | Dispatch DPS Police vehicles for incidents on highways and the parkway.  |
|                               |   | Coordinate incident response with other public safety agencies (police, fire, EMS, sheriff, etc.) as well as with TxDOT.   |
|                               |   | Perform incident detection and verification for the highways within the region, and provide this information to traffic and other public safety agencies.                                      |
|                               |   | Coordinate maintenance resources in response to incidents on state highways with regional maintenance providers.   |
|                               |   | Coordinate an incident response with regional rail operations for incidents involving rail.  |
|                               | City of Austin and Travis County (911 Dispatch) | Receive emergency calls for incidents within the City or the County.   |
|                               |   | Coordinate public safety resources for incident response with the City's traffic operations center (TOC).  |
|                               |   | Coordinate incident response with other public safety agencies (fire and EMS).   |
|                               |   | Dispatch the City's police vehicles, fire vehicles and EMS vehicles and dispatch county public safety vehicles, as well as coordinate with all other public safety agencies within the region. |
|                               |   | Perform incident detection and verification for the streets within the City and County, and provide this information to the City's TOC.  |
|                               |   | Coordinate an incident response with regional rail operations for incidents involving rail.  |
|                               |   | Coordinate maintenance resources in response to incidents within the City and within the County.   |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service                    | Stakeholder                      | Roles/Responsibilities   |
|---|----------------------------------|--|
| Incident Management (Traffic) (continued) | City of Round Rock Public Safety | Coordinate incident response with the County public safety departments.  |
|   |                                  | Dispatch the City's public safety vehicles (police, fire and EMS) as well as coordinate with all other public safety agencies within the region.           |
|   |                                  | Coordinate public safety resources for incident response with regional traffic agencies, including the City's TOC and regional TMCs.                       |
|   |                                  | Coordinate with ambulance services in response to incidents within the City.   |
|   |                                  | Coordinate an incident response with regional rail operations for incidents involving rail.  |
|   | County Sheriff                   | Receive emergency calls for incidents within the counties.   |
|   |                                  | Dispatch the County's sheriff vehicles (and track their location) as well as coordinate with all other public safety agencies within the region.           |
|   |                                  | Coordinate incident response with the county's public safety agencies (fire and EMS).  |
|   |                                  | Perform incident detection and verification for the streets within the county, and provide this information to the regional TMCs.                          |
|   |                                  | Coordinate an incident response with regional rail operations for incidents involving rail.  |
|   |                                  | Coordinate maintenance resources in response to incidents within the county of an adjacent municipality.   |
|   | Municipalities                   | Receive emergency calls for incidents within the municipalities.   |
|   |                                  | Coordinate public safety resources for incident response with the municipality's TOC or TMC.   |
|   |                                  | Dispatch the municipality's police vehicles, fire vehicles and EMS vehicles as well as coordinate with all other public safety agencies within the region. |
|   |                                  | Perform incident detection and verification for the streets within the municipalities, and provide this information to the municipality TOCs.              |
|   |                                  | Coordinate an incident response with regional rail operations for incidents involving rail.  |
|   |                                  | Coordinate with ambulance services in response to incidents within the City.   |
|   |                                  | Coordinate maintenance resources in response to incident with the municipality.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service                    | Stakeholder         | Roles/Responsibilities   |
|---|---------------------|--|
| Incident Management (Traffic) (continued) | University of Texas | Receive emergency calls for incidents within the University.   |
|   |                     | Dispatch the University Police vehicles as well as coordinate with all other public safety agencies within the region (City and County level).   |
|   |                     | Coordinate incident response with the City Police.   |
|   |                     | Perform incident detection and verification for the streets within the University, and provide this information to the regional and City TMC.  |
|   |                     | Coordinate maintenance resources in response to incident within the University.  |
| Transit Management                        | CapMetro            | Track vehicle location on all agency fixed route transit vehicles, demand response vehicles, and commuter rail.  |
|   |                     | Provide transit schedule and fare information to the agency's website, the TxDOT 511 system, regional traveler information providers, and private sector traveler information service providers. |
|   |                     | Provide fixed route bus service for the agency defined service area through fixed route transit vehicles and commuter rail.  |
|   |                     | Provide demand response bus service (STS) for the agency defined service area, with the ability to provide a demand response transit plan from the agency website.                               |
|   |                     | Provide transit passenger electronic fare payment on all agency fixed route, demand response, STS, and commuter rail transit vehicles.   |
|   |                     | Provide transit security on all agency transit vehicles through silent alarms, sensors, AVL, and surveillance systems.   |
|   |                     | Provide automated transit maintenance scheduling through automated vehicle condition reports on all agency fixed route, demand response, STS, and commuter transit vehicles.                     |
|   |                     | Obtain traffic signal priority from the municipalities in the agency's service area through the municipality's field equipment for all fixed route transit vehicles.                             |
|   |                     | Coordinate transit service with all other agency transit vehicles.   |
|   |                     | Coordinate transit service with other regional transit providers, as well as regional intermodal terminals, AMTRAK stations, and regional airports.  |
|   |                     | Provide transit traveler information to the agency website (thus accessible from the Internet) as well as making it available on all transit information kiosks and transit vehicles.            |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service         | Stakeholder                  | Roles/Responsibilities   |
|--------------------------------|------------------------------|--|
| Transit Management (continued) | CapMetro (continued)         | Coordinate emergency plans with Municipal, County, and Statewide EOCs and provide emergency transit services for evacuations, fires, and disasters (including re-entry).                         |
|                                | CARTS                        | Track vehicle location and evaluate schedule performance on all agency fixed route transit vehicles and demand response transit vehicles.  |
|                                |                              | Provide transit schedule and fare information to the agency's website, the TxDOT 511 system, regional traveler information providers, and private sector traveler information service providers. |
|                                |                              | Provide fixed route bus service for the agency defined service area.   |
|                                |                              | Provide demand response bus service for the agency defined service area, with the ability to provide a demand response transit plan from the agency website.                                     |
|                                |                              | Provide transit passenger electronic fare payment on all agency fixed route and demand response transit vehicles.  |
|                                |                              | Provide transit security on all agency transit vehicles through silent alarms and surveillance systems.  |
|                                |                              | Provide automated transit maintenance scheduling through automated vehicle condition reports on all agency fixed route and demand response transit vehicles.                                     |
|                                |                              | Coordinate transit service with other regional transit providers, as well as regional intermodal terminals, AMTRAK stations, and regional airports.  |
|                                |                              | Provide transit traveler information to the agency website (thus accessible from the Internet) as well as making it available on all transit information kiosks and transit vehicles.            |
|                                |                              | Coordinate emergency plans with Municipal, County, and Statewide EOCs and provide emergency transit services for evacuations, fires, and disasters (including re-entry).                         |
|                                | Independent School Districts | Track vehicle location and evaluate schedule performance on all school district vehicles.  |
|                                |                              | Provide school bus schedule and route information to the school district website.  |
|                                |                              | Provide fixed route school bus service for the cities, municipalities, and counties within the State of Texas.   |
|                                |                              | Provide transit security on all transit vehicles through silent alarms and surveillance systems.   |
|                                |                              | Provide automated transit maintenance scheduling through automated vehicle conditions reports on all Independent School District buses.  |
|                                |                              | Coordinate emergency plans with Municipal, County, and Statewide EOCs and provide emergency transit services for evacuations, fires, and disasters (including re-entry).                         |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service         | Stakeholder                 | Roles/Responsibilities   |
|--------------------------------|-----------------------------|--|
| Transit Management (continued) | TxDOT                       | Provide a demand-response intake center to aid the traveling public in coordinating with demand response transit vehicles.   |
|                                |                             | Provide the ability to determine a demand response transit plan.   |
| Traveler Information           | TxDOT                       | Operate the state 511 system.  |
|                                |                             | Collect traffic, incident, transit schedule, road maintenance and weather information and provide it to the media and private travelers.   |
|                                |                             | Provide broadcast information to travelers.  |
|                                |                             | Coordinate and share traveler information with all other traveler information providers within the region.   |
|                                |                             | Provide traveler information to private travelers (in vehicle, personal computing device, or kiosk) upon request.  |
|                                |                             | Provide traveler information to the media.   |
|                                |                             | Provide a route guidance system for private commercial fleets based on information gathered from HCRS.   |
| Emergency Management           | Department of Public Safety | Dispatch State Police vehicles (and track their location) as well as coordinate with all other public safety agencies within the region.   |
|                                |                             | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                |                             | Operates a PSAP for statewide services, but has the ability to dispatch regional and statewide emergency services.   |
|                                |                             | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.                                    |
|                                |                             | Receive signal preemption from regional traffic signals.   |
|                                |                             | Receive and respond to threat information from the City's TMC regarding critical infrastructure.   |
|                                |                             | Receive AMBER Alert and other Wide-Area Alert information from the State Office of Emergency Management.   |
|                                |                             | Generate AMBER Alerts and distribute them to regional emergency management agencies, transit agencies, traffic agencies, and the media.  |
|                                |                             | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                |                             | Receive Wide-Area Alert information from the Regional EOCs.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service           | Stakeholder                      | Roles/Responsibilities   |
|----------------------------------|----------------------------------|--|
| Emergency Management (continued) | City of Austin Police Department | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                  |                                  | Dispatch the City's police vehicles (and track their location) as well as coordinate with all other public safety agencies within the City and region.                               |
|                                  |                                  | Perform incident detection and verification for streets within the City.   |
|                                  |                                  | Receive AMBER Alert and other Wide-Area Alert information from the Department of Public Safety (DPS).  |
|                                  |                                  | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |                                  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  | City of Austin Fire Department   | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                  |                                  | Dispatch the City's police vehicles (and track their location) as well as coordinate with all other public safety agencies within the City and region.                               |
|                                  |                                  | Perform incident detection and verification for streets within the City.   |
|                                  |                                  | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |                                  | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |                                  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  | City of Round Rock Public Safety | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                  |                                  | Operates 9-1-1 center for the City and County, with the ability to dispatch regional and statewide emergency services.   |
|                                  |                                  | Dispatch the City's police vehicles (and track their location) as well as coordinate with all other public safety agencies within the City and region.                               |
|                                  |                                  | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.                                    |
|                                  |                                  | Receive signal preemption from City's traffic signals, and regional traffic signals.   |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service           | Stakeholder                                  | Roles/Responsibilities   |
|----------------------------------|--|--|
| Emergency Management (continued) | City of Round Rock Public Safety (continued) | Perform incident detection and verification for streets within the City.   |
|                                  |  | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |  | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  | Municipalities                               | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).   |
|                                  |  | Operates PSAP for the municipalities, with the ability to dispatch regional and statewide emergency services.  |
|                                  |  | Dispatch the municipality's public safety vehicles (and track their location) as well as coordinate with all other public safety agencies within the municipality and the region.      |
|                                  |  | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.                                      |
|                                  |  | Receive signal preemption from municipality and City traffic signals, as well as regional traffic signals.   |
|                                  |  | Perform incident detection and verification for streets within the municipalities of the region.   |
|                                  |  | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |  | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  |  | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).   |
|                                  | County Sheriff                               | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).   |
|                                  |  | Operate 9-1-1 center for the County, with the ability to dispatch regional and statewide emergency services.   |
|                                  |  | Dispatch the County sheriff's vehicles (and track their location) and county public safety vehicles and coordinate with all other public safety agencies within the county and region. |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service           | Stakeholder                 | Roles/Responsibilities   |
|----------------------------------|-----------------------------|--|
| Emergency Management (continued) | County Sheriff (continued)  | Receive signal preemption for county public safety vehicles from regional traffic signals.   |
|                                  |                             | Perform incident detection and verification for streets within the counties of the state as well as on county roads.   |
|                                  |                             | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |                             | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |                             | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  | Travis County Public Safety | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                  |                             | Dispatch the County's public safety vehicles (and track their location) as well as coordinate with all other public safety agencies within the county and region.                    |
|                                  |                             | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.                                    |
|                                  |                             | Receive signal preemption from regional traffic signals.   |
|                                  |                             | Perform incident detection and verification for county roads.  |
|                                  |                             | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |                             | Receive Wide-Area Alert information from the Regional EOCs.  |
|                                  |                             | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|                                  | Williamson County EMS/EOC   | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|                                  |                             | Operate a PSAP for the County, with the ability to dispatch regional and statewide emergency services.   |
|                                  |                             | Dispatch the County's public safety vehicles (and track their location) as well as coordinate with all other public safety agencies within the county and region.                    |
|                                  |                             | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.                                    |
|                                  |                             | Receive signal preemption from municipal traffic signals as well as regional traffic signals.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service           | Stakeholder                                     | Roles/Responsibilities   |
|----------------------------------|---|--|
| Emergency Management (continued) | Williamson County EMS/EOC (continued)           | Perform incident detection and verification on county roads.   |
|                                  |   | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |   | Generate and coordinate wide-area alerts and distribute them to regional emergency management agencies, transit agencies, traffic agencies, regional information service providers, and the media. |
|                                  |   | Plan and coordinate region wide emergency plans, evacuation and reentry plans, and disaster management plans dealing with HAZMAT incidents.  |
|                                  |   | Provide regional traffic, transit, emergency management, and maintenance operations with disaster information to disseminate to the traveling public.  |
|                                  | County Emergency Management Agencies            | Responsible for the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).   |
|                                  |   | Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center.  |
|                                  |   | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|                                  |   | Generate and coordinate wide-area alerts and distribute them to regional emergency management agencies, transit agencies, traffic agencies, regional information service providers, and the media. |
|                                  |   | Plan and coordinate region wide emergency plans, evacuation and reentry plans, and disaster management plans dealing with HAZMAT incidents.  |
|                                  |   | Provide regional traffic, transit, emergency management, and maintenance operations with disaster information to disseminate to the traveling public.  |
|                                  | City of Austin and Travis County (911 Dispatch) | Operate 9-1-1 center for the City and County, with the ability to dispatch regional and statewide emergency services.  |
|                                  |   | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).               |
|                                  |   | Dispatch City fire vehicles with suggested route information and track the vehicles to the incident.   |
|                                  |   | Receive and respond to threat information from regional transportation infrastructure protection equipment.  |
|                                  |   | Dispatch all city, county, municipality, and DPS vehicles to incidents within the region.  |
|                                  |   | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service  | Stakeholder   | Roles/Responsibilities   |
|---|---|--|
| Emergency Management (continued)  | City of Austin and Travis County (911 Dispatch) (continued) | Receive Wide-Area Alert information from the Regional EOCs.  |
|   |   | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|   |   | Operate 9-1-1 center for the City and County, with the ability to dispatch regional and statewide emergency services.  |
|   | Austin/Travis County Office of Emergency Management (EOC)   | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).               |
|   |   | Operates PSAP for the City and the County, with the ability to dispatch regional and statewide emergency services.   |
|   |   | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|   |   | Generate and coordinate wide-area alerts and distribute them to regional emergency management agencies, transit agencies, traffic agencies, regional information service providers, and the media. |
|   |   | Plan and coordinate region wide emergency plans, evacuation and reentry plans, and disaster management plans dealing with HAZMAT incidents.  |
|   |   | Provide regional traffic, transit, emergency management, and maintenance operations with disaster information to disseminate to the traveling public.  |
|   | City of Austin Aviation Department                          | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).               |
|   |   | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|   |   | Receive Wide-Area Alert information from the Regional EOCs.  |
|   |   | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|   | Public/Private Ambulance Providers                          | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function).               |
|   |   | Coordinates with regional and statewide emergency services to dispatch and track their own vehicles.   |
| Coordinates with regional medical centers regarding the status of the care facility as well as the patient status en route to the medical center. |   |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service  | Stakeholder                                    | Roles/Responsibilities   |
|---|--|--|
| Emergency Management (continued)  | Public/Private Ambulance Providers (continued) | Dispatch ambulance vehicles with suggested route information and track the vehicles to the incident.   |
|   |  | Receive signal preemption from municipal and City traffic signals as well as regional traffic signals.   |
|   |  | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|   |  | Receive Wide-Area Alert information from the Regional EOCs.  |
|   |  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|   | University of Texas                            | Participates in the incident response, coordination, and reporting of the Statewide Mutual Aid and Incident Management Network in a coordination effort only (no dispatch function). |
|   |  | Dispatch Special Police vehicles (and track their location) as well as coordinate with all other public safety agencies within the City.   |
|   |  | Perform incident detection and verification for streets within the specified area of responsibility.   |
|   |  | Receive AMBER Alert and other Wide-Area Alert information from DPS.  |
|   |  | Receive Wide-Area Alert information from the Regional EOCs.  |
|   |  | Aide in the coordination of region wide emergency plans, evacuation and reentry plans, and disaster management plans.  |
|   | Lower Colorado River Authority                 | Receive flood monitoring information from its own field equipment.   |
|   |  | Provide flood warning information to regional TMCs/TOCs and regional transit agencies.   |
|   | TxDOT  | Receive flood monitoring information from its own field equipment.   |
|   |  | Provide flood warning information to regional TMCs/TOCs, regional transit agencies, regional maintenance agencies, and the media.  |
|   |  | Provide flood warning information to the traveling public through DMS and with flood gates.  |
|   |  | Provide disaster traveler information to regional emergency management agencies, regional traffic agencies, and regional transit agencies.   |
|   | City of Austin                                 | Receive flood monitoring information from its own field equipment (water level monitors and CCTV cameras).   |
| Provide flood warning information to regional TMCs/TOCs, regional transit agencies, regional maintenance agencies, and the media. |  |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service  | Stakeholder                             | Roles/Responsibilities   |  |
|---|---|--|--|
| Emergency Management (continued)  | City of Austin (continued)              | Provide flood warning information to the traveling public through DMS and with flood gates.  |  |
|   |   | Provide disaster traveler information to regional emergency management agencies, regional traffic agencies, and regional transit agencies. |  |
|   | City of Georgetown                      | Receive flood monitoring information from its own field equipment (water level monitors and CCTV cameras).                                 |  |
|   |   | Provide flood warning information to regional TMCs/TOCs, regional transit agencies, regional maintenance agencies, and the media.          |  |
|   |   | Provide flood warning information to the traveling public through DMS and with flood gates.  |  |
|   |   | Provide disaster traveler information to regional emergency management agencies, regional traffic agencies, and regional transit agencies. |  |
|   | City of Round Rock                      | Receive flood monitoring information from its own field equipment (water level monitors and CCTV cameras).                                 |  |
|   |   | Provide flood warning information to regional TMCs/TOCs, regional transit agencies, regional maintenance agencies, and the media.          |  |
|   |   | Provide flood warning information to the traveling public through DMS and with flood gates.  |  |
|   |   | Provide disaster traveler information to regional emergency management agencies, regional traffic agencies, and regional transit agencies. |  |
|   | City of San Marcos                      | Receive flood monitoring information from its own field equipment (water level monitors and CCTV cameras).                                 |  |
|   |   | Provide flood warning information to regional TMCs/TOCs, regional transit agencies, regional maintenance agencies, and the media.          |  |
|   |   | Provide flood warning information to the traveling public through DMS.   |  |
|   |   | Provide disaster traveler information to regional emergency management agencies, regional traffic agencies, and regional transit agencies. |  |
|   | Maintenance and Construction Management | TxDOT  | Receive a request for maintenance resources for incident response from regional emergency management agencies. |
|   |   |  | Coordinate maintenance resources for incidents with other regional maintenance providers.                      |
| Receive vehicle location information from agency maintenance and construction vehicles.   |   |  |  |
| Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with the agency's district mechanic shop. |   |  |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service                              | Stakeholder       | Roles/Responsibilities  |
|---|-------------------|---|
| Maintenance and Construction Management (continued) | TxDOT (continued) | Collect road weather information with agency field equipment and distribute it to regional traffic, maintenance and transit agencies as well as the national weather service and the media.                               |
|   |                   | Provide maintenance of state highways within the region, including pavement maintenance and all construction activities.  |
|   |                   | Coordinate maintenance activities with the agency's district engineer and with the agency's asset management system.  |
|   |                   | Dispatch agency maintenance vehicles and get operations status from these vehicles.   |
|   |                   | Provide maintenance to all field equipment owned and operated by the agency.  |
|   |                   | Manage work zones on all agency maintenance and construction activities, as well as monitors work zone safety with agency field devices and vehicles.   |
|   |                   | Provide maintenance status and notification information to the traveling public through agency owned DMS.   |
|   |                   | Monitor the safety of maintenance and construction activities through early warning systems and sensors on maintenance and construction field equipment.  |
|   |                   | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.  |
|   |                   | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, transit providers, rail operations, and the media. |
|   | City of Austin    | Receive a request for maintenance resources for incident response from regional emergency management agencies.  |
|   |                   | Coordinate maintenance resources for incidents with other regional maintenance providers.   |
|   |                   | Receive vehicle location information from agency maintenance and construction vehicles.   |
|   |                   | Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's fleet services.   |
|   |                   | Provide maintenance of streets within the city, including pavement maintenance and all construction activities.   |
|   |                   | Coordinate maintenance activities with the agency's TMC and with the agency's asset management system.  |
|   |                   | Dispatch agency maintenance vehicles and get operations status from these vehicles.   |
|   |                   | Provide maintenance to all field equipment owned and operated by the City.  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service   | Stakeholder  | Roles/Responsibilities   |
|--|--|--|
| Maintenance and Construction Management (continued)  | City of Austin (continued)   | Manage work zones on City streets, and monitors the safety of work zones status with City owned vehicles and field equipment.  |
|  |  | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |
|  |  | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |
|  | City of Round Rock   | Receive a request for maintenance resources for incident response from regional emergency management agencies.   |
|  |  | Coordinate maintenance resources for incidents with other regional maintenance providers.  |
|  |  | Receive vehicle location information from agency maintenance and construction vehicles.  |
|  |  | Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's equipment repair facility.                                     |
|  |  | Provide maintenance of streets within the city, including pavement maintenance and all construction activities.  |
|  |  | Coordinate maintenance activities with the agency's TMC and with the agency's asset management system.   |
|  |  | Dispatch agency maintenance vehicles and get operations status from these vehicles.  |
|  |  | Provide maintenance to all field equipment owned and operated by the City.   |
|  |  | Manage work zones on City streets, and monitors the safety of work zones status with City owned vehicles and field equipment.  |
|  | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |  |
|  | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |  |
|  | Municipalities   | Receive a request for maintenance resources for incident response from regional emergency management agencies.   |
| Coordinate maintenance resources for incidents with other regional maintenance providers.  |  |  |
| Receive vehicle location information from agency maintenance and construction vehicles.  |  |  |
| Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's equipment repair garage. |  |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service                              | Stakeholder                   | Roles/Responsibilities   |
|---|-------------------------------|--|
| Maintenance and Construction Management (continued) | Municipalities (continued)    | Provide maintenance of streets within the municipalities, including pavement maintenance and all construction activities.  |
|   |                               | Coordinate maintenance activities with the municipal TOC and with the agency's asset management system.  |
|   |                               | Dispatch agency maintenance vehicles and get operations status from these vehicles.  |
|   |                               | Provide maintenance to all field equipment owned and operated by the municipality.   |
|   |                               | Manage work zones on municipal streets.  |
|   |                               | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |
|   |                               | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |
|   | Travis County Road Department | Receive a request for maintenance resources for incident response from regional emergency management agencies.   |
|   |                               | Coordinate maintenance resources for incidents with other regional maintenance providers.  |
|   |                               | Receive vehicle location information from agency maintenance and construction vehicles.  |
|   |                               | Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's equipment repair garage.                                       |
|   |                               | Provide maintenance of streets within the county, including pavement maintenance and all construction activities.  |
|   |                               | Coordinate maintenance activities with regional traffic operations and with the agency's asset management system.  |
|   |                               | Dispatch agency maintenance vehicles and get operations status from these vehicles.  |
|   |                               | Provide maintenance to all field equipment owned and operated by the county.   |
|   |                               | Manage work zones on county streets.   |
|   |                               | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |
|   |                               | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service   | Stakeholder                       | Roles/Responsibilities   |                    |  |
|--|-----------------------------------|--|--------------------|--|
| Maintenance and Construction Management (continued)  | Williamson County Road Department | Receive a request for maintenance resources for incident response from regional emergency management agencies.   |                    |  |
|  |                                   | Coordinate maintenance resources for incidents with other regional maintenance providers.  |                    |  |
|  |                                   | Receive vehicle location information from agency maintenance and construction vehicles.  |                    |  |
|  |                                   | Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's equipment repair facility.                                     |                    |  |
|  |                                   | Provide maintenance of streets within the county, including pavement maintenance and all construction activities.  |                    |  |
|  |                                   | Coordinate maintenance activities with regional traffic operations and with the agency's asset management system.  |                    |  |
|  |                                   | Dispatch agency maintenance vehicles and get operations status from these vehicles.  |                    |  |
|  |                                   | Provide maintenance to all field equipment owned and operated by the county.   |                    |  |
|  |                                   | Manage work zones on county streets.   |                    |  |
|  |                                   | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |                    |  |
|  |                                   | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |                    |  |
|  |                                   |  | County Departments | Receive a request for maintenance resources for incident response from regional emergency management agencies. |
|  |                                   |  |                    | Coordinate maintenance resources for incidents with other regional maintenance providers.                      |
| Receive vehicle location information from agency maintenance and construction vehicles.  |                                   |  |                    |  |
| Receive vehicle maintenance conditions from agency maintenance and construction vehicles and coordinate fleet maintenance with agency's equipment repair garage. |                                   |  |                    |  |
| Provide maintenance of streets within the county, including pavement maintenance and all construction activities.  |                                   |  |                    |  |
| Coordinate maintenance activities with regional traffic operations and with the agency's asset management system.  |                                   |  |                    |  |
| Dispatch agency maintenance vehicles and get operations status from these vehicles.  |                                   |  |                    |  |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service                              | Stakeholder                    | Roles/Responsibilities   |
|---|--------------------------------|--|
| Maintenance and Construction Management (continued) | County Departments (continued) | Provide maintenance to all field equipment owned and operated by the county.   |
|   |                                | Manage work zones on county streets.   |
|   |                                | Coordinates maintenance and construction activities with other regional maintenance and construction agencies.   |
|   |                                | Distributes maintenance and construction plans and work zone information to regional information service providers, regional traffic operations, emergency operations, rail operations, and the media. |
| Archived Data Management                            | TxDOT                          | Collect and archive transit and ridership information for the region's transit agencies.   |
|   |                                | Collect and archive pavement management/maintenance information from regional maintenance sections and provide the information to the statewide system.  |
|   |                                | Collect and archive emergency and crash information from regional emergency management agencies and DPS.   |
|   |                                | Collect and archive emergency and crash information from regional archives.  |
|   |                                | Collect and archive traffic information from the agency's regional TMC and traffic signal system.  |
|   | City of Austin                 | Collect and archive pavement management/maintenance information from its own field equipment and maintenance section and provide the information to regional and statewide systems.                    |
|   |                                | Collect and archive emergency and crash information from regional emergency management agencies and regional public safety agencies and provide this information to the statewide system.              |
|   |                                | Collect and archive traffic information from the agency's maintenance section.   |
|   | City of Round Rock             | Collect and archive pavement management/maintenance information from its own field equipment and maintenance section and provide the information to regional and statewide systems.                    |
|   |                                | Collect and archive emergency and crash information from regional emergency management agencies and regional public safety agencies and provide this information to the statewide system.              |
|   | Municipalities                 | Collect and archive pavement management/maintenance information from its own field equipment and maintenance section and provide the information to regional and statewide systems.                    |
|   |                                | Collect and archive emergency and crash information from regional emergency management agencies and regional public safety agencies and provide this information to the statewide system.              |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| Transportation Service               | Stakeholder                 | Roles/Responsibilities   |
|--------------------------------------|-----------------------------|--|
| Archived Data Management (continued) | Capital Area MPO            | Collect and archive traffic information from regional traffic management providers, emergency information from regional public safety providers, transit information from regional transit agencies, toll information from regional toll authorities, and parking information from regional parking providers for planning purposes. |
|                                      |                             | Serve as a data warehouse for regional traffic, emergency, transit, toll, and parking management agencies.   |
|                                      |                             | Serve as a virtual data warehouse for all archive systems in the region.   |
| Commercial Vehicle Operations        | City of Austin              | Provide for commercial vehicle permits (oversize/overweight) through the agency website and through coordination with other regional permitting systems.   |
|                                      |                             | Provide credential verification and route restrictions for regional commercial vehicles.   |
|                                      |                             | Coordinate fee and credential information and payment with regional and municipal permitting systems.  |
|                                      | City of Round Rock          | Provide for commercial vehicle permits (oversize/overweight) through the agency website and through coordination with other regional permitting systems.   |
|                                      |                             | Provide credential verification and route restrictions for regional commercial vehicles.   |
|                                      |                             | Coordinate fee and credential information and payment with regional and municipal permitting systems.  |
|                                      | Municipalities              | Provide for commercial vehicle permits (oversize/overweight) through the agency website and through coordination with other regional permitting systems.   |
|                                      |                             | Provide credential verification and route restrictions for regional commercial vehicles.   |
|                                      |                             | Coordinate fee and credential information and payment with regional and municipal permitting systems.  |
|                                      | TxDOT                       | Provides an electronic (web based) credentials interface for commercial vehicle credentials applications.  |
|                                      |                             | Coordinate fee and credential information and payment with regional and municipal permitting systems.  |
|                                      |                             | Provide route information to regional and statewide information service providers, including 511 and HCRS.   |
|                                      | Private Commercial Carriers | Provide emergency notification and HAZMAT information to regional emergency management providers through a concierge service provider.   |
|                                      |                             | Provide HAZMAT information to regional emergency management providers.   |

**Table 8 – Austin Stakeholder Roles and Responsibilities (continued)**

| <b>Transportation Service</b>             | <b>Stakeholder</b> | <b>Roles/Responsibilities</b>  |
|---|--------------------|--|
| Commercial Vehicle Operations (continued) | Rail Operations    | Provide emergency notification and HAZMAT information to regional emergency management providers through a concierge service provider. |
|   |                    | Provide HAZMAT information to regional emergency management providers.   |
|   | Texas DEM          | Coordinate and provide alert or evacuation information for commercial vehicle incidents (accidents or HAZMAT spills).                  |

#### 4.4 Potential Agreements

The Regional ITS Architecture for the Austin Region has identified many agency interfaces, information exchanges, and integration strategies that would be needed to provide the ITS services and systems identified by the stakeholders in the Region. Interfaces and data flows among public and private entities in the Austin Region will require agreements among agencies that establish parameters for sharing agency information to support traffic management, incident management, provide traveler information, and perform other functions identified in the Regional ITS Architecture.

With the implementation of ITS technologies, integrating systems from one or more agencies, and the anticipated level of information exchange identified in the architecture, it is likely that formal agreements between agencies will be needed in the future. These agreements, while perhaps not requiring a financial commitment from agencies in the Region, should outline specific roles, responsibilities, data exchanges, levels of authority, and other facets of regional operations. Some agreements will also outline specific funding responsibilities, where appropriate and applicable.

**Table 9** provides a list of existing and potential agreements for the Austin Region based on the interfaces identified in the Regional ITS Architecture. It is important to note that as ITS services and systems are implemented in the Region, part of the planning and review process for those projects should include a review of potential agreements that would be needed for implementation or operations.

**Table 9 – Austin Potential Agreements**

| <b>Status</b> | <b>Agreement and Agencies</b>  | <b>Agreement Description</b>  |
|---------------|--|---|
| Existing      | <b>Joint Operations/Shared Control Agreement</b> (911 RDMT Project) – TxDOT Austin District, Travis County, City of Austin, CapMetro, Austin ISD, ABIA | Provides for the development of a unified public safety communication system that could include 911 operations, CAD, mobile data information transfer, public safety and public service radio communications, and ITS management, all of which might be operated from a fully integrated combined center. |
| Existing      | <b>Data Sharing and Usage</b> – TxDOT Austin District, KEYE, KVUE, KXAN and News 8   | License agreements to access and broadcast TxDOT CCTV camera video feeds.   |

**Table 9 – Austin Potential Agreements (continued)**

| Status      | Agreement and Agencies  | Agreement Description   |
|-------------|---|---|
| Existing    | <b>Standard Operating Procedures – CTECC Partners</b>   | <p>CTECC partner agencies have developed standard operating procedures to cover the many different aspects of operating the center. Agreements are categorized into function codes that cover the following areas:</p> <p>Function Code 00 – SOP Process<br/>           Function Code 01 – General Office<br/>           Function Code 02 – Facility Maintenance<br/>           Function Code 03 – Building Security/Building Emergency<br/>           Function Code 05 – System Security/Application Administration<br/>           Function Code 07 – Radio<br/>           Function Code 08 – CTECC Administration</p> |
| In Progress | <b>Electronic Toll Interoperability Agreements – TxDOT TTA, CTRMA, Other Texas Regional Tolling Authorities</b>   | <p>Agreements to define electronic toll collection interoperability between TxDOT TTA, CTRMA, and other Texas regional tolling authorities such as the North Texas Tollway Authority and Harris County Toll Road Authority. An Interoperability Taskforce is currently in place and developing such agreements.</p>   |
| Future      | <b>ITS and Traffic Signal Timing Data Sharing and Usage – TxDOT Austin District, City of Austin, City of Cedar Park, City of Georgetown, City of Round Rock, and City of San Marcos</b> | <p>Agreement would define the parameters, guidelines, and policies for inter-agency ITS and traffic signal timing sharing between the TxDOT TMC at CTECC and cities that are at or near 50,000 in population and maintaining their own traffic signal systems.</p>  |
| Future      | <b>Incident Data Sharing and Usage – TxDOT Austin District and Emergency Management Agencies</b>  | <p>Agreement would define the parameters, guidelines, and policies for inter-agency sharing of incident data between TxDOT and emergency management agencies in the Region. Incident information could be sent directly to CAD systems and include information on lane closures, travel delays, and weather.</p>  |
| Future      | <b>Data Sharing and Usage – TxDOT Austin District and Williamson County</b>   | <p>Agreement would define the parameters, guidelines, and policies for inter-agency ITS data sharing between the TxDOT TMC at CTECC and Williamson County operations center that is currently in the planning phase.</p>  |
| Future      | <b>Data Sharing and Usage – TxDOT Austin District and Private Information Service Provider</b>  | <p>Agreements would define the parameters, guidelines, and policies for private sector (such as the media or other information service providers) use of ITS data. This type of agreement is recommended to define terms of use for broadcasting public-agency information regarding traffic conditions, closures, restrictions, as well as video images. Agreements can also include requirements for the media to 'source' the information (i.e., using the providing agencies logo on all video images broadcast).</p>   |
| Future      | <b>Operations and Maintenance Agreement – TxDOT Austin District, TxDOT TTA Division, and CTRMA</b>  | <p>Agreement to operate ITS equipment on TTA and CTRMA facilities as well as dispatch courtesy patrol vehicles. The agreement will need to address funding of these services.</p>   |

## 4.5 Phases of Implementation

The Regional ITS Architecture will be implemented through a series of projects led by both public sector and private sector agencies. Key foundation systems will need to be implemented in order to support other systems that have been identified in the Regional ITS Architecture. The deployment of all of the systems required to achieve the final Regional ITS Architecture build out will occur over many years.

A sequence of projects and their respective time frames have been identified in the Austin Regional ITS Deployment Plan. These projects have been sequenced over a 20-year period, with projects identified for deployment in 5-, 10- and 20-year timeframes.

Some of the key market packages that will provide the functions for the foundation systems in the Austin Region are listed below. Projects associated with these and other market packages identified for the Region have been included in the Austin Regional ITS Deployment Plan.

- Network Surveillance;
- Surface Street Control;
- Traffic Information Dissemination;
- Regional Traffic Control;
- Wide-Area Alerts; and
- Transit Vehicle Tracking.

## 5. USE AND MAINTENANCE OF THE REGIONAL ITS ARCHITECTURE

The ITS Architecture developed for the Austin Region addresses the Region's vision for ITS implementation at the time the plan was developed. Stakeholders invested a considerable amount of effort in the development of the Regional ITS Architecture and Regional ITS Deployment Plan. The plan needs to be incorporated into the regional planning process so that the ITS vision for the Region is considered when implementing ITS projects and to ensure that the Region remains eligible for federal funding for implementation of the projects.

As the Region grows, needs will change, and, as technology progresses, new ITS opportunities will arise. Shifts in regional needs and focus as well as changes in the National ITS Architecture will necessitate that the Austin Regional ITS Architecture be updated to remain a useful resource for the Region.

### 5.1 Use of the Regional ITS Architecture in the Regional Planning Process

The Regional ITS Architecture can serve as a valuable resource in the development of the Long Range Transportation Plan (LRTP). **Figure 9** illustrates the CAMPO planning process and the involvement of the ITS Architecture in that process. The CAMPO Congestion Management Process and ITS Working Group provides input into the LRTP on ITS needs for the Region. The needs identified in the ITS Architecture should be considered by the Working Group when providing this input. During the project selection process the market package prioritization developed by stakeholders during the ITS architecture development process should be utilized to facilitate the selection of projects for inclusion in the LRTP.

As projects transition from the LRTP to the Transportation Improvement Program (TIP), each project should be evaluated to determine if the project includes any ITS elements. If the project contains an ITS element, then the Regional ITS Architecture needs to be reviewed to ensure that the project is in conformance. CAMPO will assist agencies as they perform this examination as part of the project application process using the procedure outlined in Section 5.1.1.

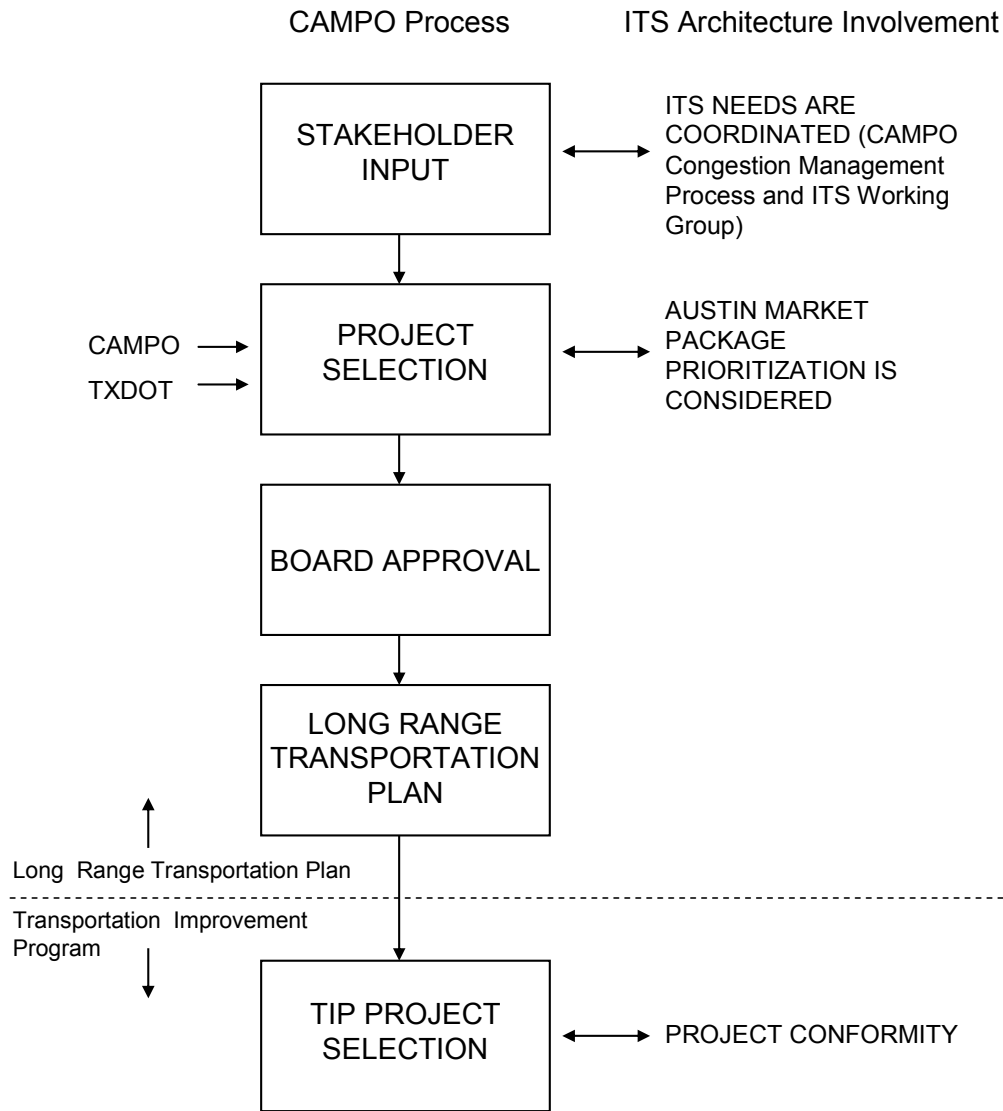

Figure 9 – CAMPO Regional Planning Process and ITS Architecture Involvement

### 5.1.1 Process for Determining Architecture Conformity

The Austin Regional ITS Architecture documents the customized market packages that were developed as part of the ITS architecture process. To satisfy federal requirements and remain eligible to use federal funds, a project must be accurately documented. A section will be added to the CAMPO project proposal form to guide applicants through the process of determining conformance with the architecture. Applicants will be asked to attach a copy of the applicable market package(s) to their application. The steps of the process are as follows:

- Identify the ITS components in the project;
- Identify the corresponding market packages(s) from the Regional ITS Architecture;
- Locate the component within the market package;
- Compare the connections to other agencies or elements documented in the ITS architecture as well as the information flows between them to the connections that will be part of the project ; and
- Document any changes necessary to the ITS Architecture or the project to ensure there is conformance.

#### Identifying the ITS Components

ITS components can be fairly apparent in an ITS focused project such as CCTV or DMS deployments, but could also be included in other types of projects. For example, an arterial widening project could include the installation of signal system interconnect, signal upgrades, and the incorporation of the signals in the project limits into the City's closed loop signal system. These are all ITS deployments and should be part of the ITS architecture.

#### Identifying the Corresponding Market Packages

If a project was included in the ITS Deployment Plan **Table 10** through **Table 15**, then the applicable market package(s) for that project are identified in a column. ITS projects are not required to be included in the ITS Deployment Plan in order to be eligible for federal funding; therefore, market packages might need to be identified without the assistance of an ITS Deployment Plan. In that case, the market packages selected and customized for the Austin Region are identified in **Table 4** of this document, detailed market package definitions are located in **Appendix B**, and customized market packages for the Region are included in **Appendix C**.

#### Identifying the Component within the Market Package

The customized market packages for the Austin Region are located in **Appendix C**. Once the element is located on the market package the evaluator may determine that the element name should be modified. For example, an element called the City of Cedar Park TOC was included in the architecture, but at the time of deployment, the City might decide to call the center by a new name. This name change should be documented using the process outlined in Section 5.3.

#### Evaluating the Connections and Flows

The connections and architecture flows documented in the market package diagrams were selected based on the information available at the time the plan was developed. As the projects are designed, decisions will be made on the system layout that might differ from what is shown in the market package. These changes in the project should be documented in the ITS market packages using the process outlined in Section 5.3.

### Documenting Required Changes

If any changes are needed to accommodate the project under review, Section 5.3 describes how those changes should be documented. Any changes will be incorporated during the next architecture update. Conformance will be accomplished by documenting how the market package(s) should be modified so that the connections and data flows are consistent with the project.

## 5.2 Maintenance Process

TxDOT will be responsible for leading the maintenance of the Austin Regional ITS Architecture and Deployment Plan in coordination with CAMPO. Maintenance includes both modifications to the plan as well as complete updates. **Table 10** summarizes the maintenance process agreed upon by stakeholders in the Region.

**Table 10 – Regional ITS Architecture and Deployment Plan Maintenance Summary**

| Maintenance Details          | Regional ITS Architecture  |  | Regional ITS Deployment Plan                               |  |
|------------------------------|--|--|--|--|
|                              | Modification   | Complete Update  | Modification   | Complete Update                                      |
| <b>Timeframe for Updates</b> | As needed  | Every 4 years  | Annually   | Every 4 years  |
| <b>Scope of Update</b>       | Update market packages to satisfy architecture compliance requirements of projects or to document other changes that impact the ITS Architecture | Entire ITS Architecture  | Update project status and add or remove projects as needed | Entire ITS Deployment Plan                           |
| <b>Lead Agency</b>           | CAMPO  | TxDOT  | TxDOT/CAMPO  | TxDOT  |
| <b>Participants</b>          | Stakeholders impacted by market package modifications  | Entire stakeholder group   | Entire stakeholder group                                   |  |
| <b>Results</b>               | Market package or other change(s) documented for next complete update  | Updated Austin Regional ITS Architecture document, Appendices, and Turbo Architecture database | Updated project tables                                     | Updated Austin Regional ITS Deployment Plan document |

Modifications to the Regional ITS Architecture will often be necessitated by ITS projects that are receiving federal funding but do not conform to the Regional ITS Architecture. CAMPO will take the lead in working with agencies that receive federal funding for ITS projects and will keep a record of any changes that are needed to the Regional ITS Architecture. Complete updates to the Regional ITS Architecture will occur approximately every four years in the year preceding the TIP update and will be led by the TxDOT Austin District. The next TIP will cover 2011 to 2014 and be due in May 2010; therefore, the next update of the Regional ITS Architecture will need to

be completed by 2010. Section 4 of the ITS Deployment Plan contains additional detail on the annual project review process.

The Regional ITS Deployment Plan should be modified annually. The annual modifications should consist primarily of updates to the recommended projects, including identification of any projects in the plan that have been deployed and any new project that should be added to the plan. This effort could be led by the TxDOT Austin District or the CAMPO Congestion Management Process and ITS Working Group. A complete update of the ITS Deployment Plan should occur every four years as part of the ITS Architecture update. The TxDOT Austin District will lead this effort.

### **5.3 Procedure for Submitting ITS Architecture Changes Between Scheduled Updates**

Updates to the Austin Regional ITS Architecture will occur on a regular basis as described in Section 5.2 to maintain the architecture as a useful planning tool. Between complete plan updates, smaller modifications will likely be required to accommodate ITS projects in the Region. Section 5.1.1 contains step by step guidance for determining whether or not a project requires architecture modifications.

For situations where a change is required, an ITS Architecture Maintenance Documentation Form was developed and is included in **Appendix F**. This form should be completed and submitted to CAMPO whenever a change to the Regional ITS Architecture is proposed.

The Maintenance Documentation form identifies three levels of modifications. They include:

- Level 1 – Basic changes that do not affect the structure of the architecture  
Examples include: Changes to stakeholder or element name, element status, or data flow status.
- Level 2 – Structural changes that impact only one agency  
Examples include: Addition of a new market package or modifications to an existing market package that affects only one agency.
- Level 3 – Structural changes that have the potential to impact multiple agencies  
Examples include: Addition of a new market package or modifications to an existing market package that involves multiple agencies or incorporation of a new stakeholder into the architecture.

In the process of documenting the change, the stakeholder proposing the change should contact any other agency that will be impacted by the modification to obtain feedback. This communication between agencies will simplify the process of performing a complete plan update. CAMPO will review and accept the proposed changes. When a complete update is performed by TxDOT, all of the documented changes will be incorporated into the architecture. This documentation will most likely be performed in conjunction with project conformance documentation as part of the TIP project application process; however, changes could be documented at other times as agencies are planning for future projects using the same form.
